United Elchem Industries

Category 1

Plastic Pipe Cements and Primers

Oatey sells only Lo-VOC solvent cements, which means they are compliant with the South Coast Air Quality Management District (SCAQMD) Rule 1168 and the Ozone Transport Commission (OTC) standards. Plus they meet ASTM, NSF and UPC standards for a wide variety of applications, including potable water, DWV, industrial, pool/spa, turf/irrigation, sewer and many more. With Oatey you get more than just the strongest solvent welded joint – you get the confidence of the top selling brands, backed by years of extensive research and leadership in the plumbing industry. That's why Oatey has been the choice of plumbing professionals for nearly 100 years.

Blue Lava Hot PVC Cement (see page 9)

The HOTTEST PVC cement in the industry

Maximize your productivity in all weather climates. Blue Lava Hot PVC Cement can handle any job, from irrigation and agriculture to pool and spa and is perfect for damp or humid conditions.

- **Fast** – sets up 25-50% faster than other "hot" cements on the market.
- **Hot** – quickly melts pipe surface to weld the joint. Priming step not necessary where local codes permit.
- **Thick** – Blue Lava is two to five times thicker than other "hot" cements, which means it clings to the pipe surface better, and doesn't end up on the floor.

Systems can be hydrostatically tested up to 75 PSI after 15 minutes, and up to 180 PSI after 30 minutes (at temperatures above 60°F and up to 2" pipe diameter).

Oatey Blue Lava Hot PVC Cement – nothing is hotter!

Orange Lava Hot CPVC Cement (See page 9)

The HOTTEST CPVC cement in the industry

Orange Lava Hot CPVC Cut-In Cement is perfect for any repair job that requires minimal downtime for existing plumbing systems. With the lowest set-up and cure times in the industry, Orange Lava also has the highest concentration of THF.

- **Fast** – Fast – bond strength of up to 250 PSI in just 10 minutes in lab conditions –so fast it eliminates the need for bracing.
- **Hot** – quickly melts pipe surface to weld the joint. Priming step not necessary where local codes permit.
- **Thick** – Orange Lava is two to five times thicker than other "hot" cements, which means you get more cement on the pipe, and less on the floor.

Oatey Orange Lava Hot CPVC Cut-In Cement – our hottest cement yet!

HOW TO SOLVENT WELD

Pipe Types

CPVC: Chlorinated Polyvinyl Chloride – Typically used for pressure piping applications, including hot and cold potable water distribution. Can also be used for corrosive fluid handling in industrial or chemical applications.

ABS: Acrylonitrile Butadiene Styrene – Typically used for non-pressure piping applications.

PVC: Polyvinyl Chloride – Typically used for pressure or non-pressure piping applications.

Solvent Cements for any Application

If you need to solvent weld one pipe joint or one thousand, Oatey® is the solvent cement more professionals choose than any other brand. From hot to cold, wet to dry, Oatey has the solvent cement to meet your exact requirement for any plastic pipe installation.

Solvent Cement Cure Times

The cure time of solvent cements is dependent on several factors. The pipe size, socket fit, ambient temperature, relative humidity, solvent cements and the system operating pressure should all be considered when determining cure times.

Oatey Solvent Cements are developed with the plumbing contractor in mind. New products like **Orange Lava Hot CPVC Cement** have the lowest set up and cure times in the industry, a perfect fit for any job requiring minimal downtime.

Oatey continues to work hard to provide you peace of mind and confidence when using Oatey brand solvent cements and products.

Cure chart see page xxx

How To Solvent Weld

PRIOR TO USE: Read all product labels carefully.

Stir or shake cement before using. If jelly-like, do not use. Keep container closed when not in use. Avoid eye and skin contact. Wear safety glasses with side shields and wear rubber gloves.

1. Square pipe ends, chamfer and remove all dirt.
2. Check dry fit of pipe and fitting. Pipe should easily go 1/3 of the way into the fitting. If pipe bottoms, it should be snug.
3. Use a suitable applicator at least 1/2 the size of the pipe diameter. For larger size pipe systems use a natural bristle brush or roller.
4. Clean pipe and fitting with a listed primer. (Do not use primer on ABS pipe and fittings. Use Clear Cleaner only!)
5. Apply liberal coat of cement to pipe to the depth of the socket, leave no uncoated surface.
6. Apply a thin coat of cement to inside of fitting, avoid puddling of cement. Puddling can cause weakening and premature failure of pipe or fitting. Apply a second coat of cement to the pipe.
7. Assemble parts QUICKLY. Cement must be fluid. If cement surface has dried, recoat both parts.
8. Push pipe FULLY into fitting using a 1/4 turning motion until pipe bottoms.
9. Hold pipe and fitting together for 30 seconds to prevent pipe push-out – longer at low temperatures. Wipe off excess.
10. Allow 15 minutes for good handling strength and 2 hours cure time at temperatures above 60°F before pressure testing up to 180 psi. Longer cure times may be required at temperatures below 60°F or with pipe above 3". DO NOT TEST WITH AIR.

For specialty cements and chemical applications, please see specific product label instructions.

Thread Sealants and Leak Detectors

When it comes to Thread Sealants, nobody does it better than Oatey® and Hercules®. Together we have formulated and manufactured thread sealants for more than 70 years. We continuously respond to professional plumbers' changing needs with new technology, new ideas, and new products. From low-pressure to high-pressure piping demands, from plastics to metals, as well as the market's need for PTFE – we lead the industry with Thread Sealants and Pipe Joint Compounds that provide solutions.

CATEGORY 2 THREAD SEALANTS AND LEAK DETECTORS

Hercules® MEGALOC® Thread Sealant (see page 37)

Now with DuPont™ Kevlar®

Call it the plumbing industry's only "bulletproof" thread sealant. **MEGALOC® Thread Sealant** now features **DuPont™ Kevlar®** in its formula. That's one part of what makes MEGALOC the highest performing thread sealant on the market. Another is the fact that it wipes clean from hands and tools with just a dry rag. And it washes out of clothing too.

For use on both plastic and metal pipe and fittings, MEGALOC is grit-free and does not contain PTFE. It sets soft; no cure time required; never hardens, cracks or becomes brittle. No odor. It's non-separating, non-flammable, and non-hazardous, with leak-proof hydraulic resistance to 12,000 PSI. It withstands gas pressure to 2600 PSI and performs over a temperature range of -50° to 400°F (on steel pipe).

Use MEGALOC on all metals, including galvanized steel, black iron, aluminum, copper, brass, stainless steel, and on PVC, ABS, and CPVC plastics. Not recommended for lines carrying concentrated acids, alkalis, ketones and oxygen.

Certified to ANSI/NSF Standard 61. Safe for drinking water lines. UPC listed. Meets CSA requirements 4-90 for gas. Low VOC. Meets Fed. Spec. TT-S-1732. Blue.

Only From Hercules®!

HOW TO USE SOLDER & LEAD PRODUCTS

Application:

1. Assemble all material you will need.
2. Select Oatey® soldering products. Read all instructions carefully.
3. Select and cut the copper pipe squarely using a tubing cutter or hacksaw.
4. Clean all the copper surfaces to be joined using Oatey fitting and tubing brushes or sandcloth.
5. Apply Oatey tinning or paste flux to the inside of the copper fitting and outside of the copper pipe.
6. Assemble the joint.
7. Heat the joint evenly and apply Oatey solder wire to the joint only after flux begins to bubble. This indicates proper temperature has been reached.
8. Remove heat and solder wire once a bead has formed around the fitting. Allow the solder to cool before wiping away excess with a damp cloth.

Soldering is the most common method for connecting joints in copper water lines. Flux is used to remove foreign material from copper surfaces and to etch the copper surface. Without flux, solder will not flow into the joint. Thus, filling the void between the pipe and fitting provides a water-tight seal. Oatey Safe-Flo® Silver works much like 50/50 solder. Oatey #95 Tinning Flux contains powdered lead-free solder that melts when the joint is heated, coating the joint with a thin layer of solder that ensures the solid wire will flow into the joint. When used together, they are as easy to use as a 50/50 solder.

1. After you have selected Oatey #95 Tinning Flux and Safe-Flo Silver Solder, assemble your materials and put on protective eye wear. You'll need to cut your pipe. A tubing cutter will ensure a square cut. If the joint is not cut squarely or if the tube is mis-shaped, the joint may not solder properly.
2. All surfaces to be soldered must be free of all foreign material and the oxide that forms on copper tubing. We recommend that you use Oatey fitting and tubing brushes or sandcloth. The Oatey 4-in-1 brush is a convenient tool for cleaning 1/2" and 3/4" copper tube and fittings. If all surfaces are bright and shiny, the flux will properly etch the copper surface. When applying flux, remember to coat both the fitting and copper tube before you assemble your joint. Use caution when working with Oatey flux as well as with any flux. Do not allow contact with eyes or skin. Wear impervious clothing while handling. Wash thoroughly when finished.
3. Although heating the joint is not a complicated process, you must be sure to address a few issues before you begin.
 - If the joint to be heated is close to a floor joist, wall stud or any combustible material, place an Oatey Flame Protector between the joint and material of concern. This will provide protection from heat and flames up to 2,000° F.
 - If you are soldering an existing water line, try to drain the line as much as possible. Water in the line will prevent the joint from reaching the required temperature. If you cannot drain all the water sufficiently, place a wadded up piece of bread into the line to prevent the water from flowing. The bread will hold the water back, allow the joint to be heated, and then easily wash away through the line when the water is turned on.
 - Solder flows to the hottest part of the joint, so heat the joint evenly so that the Safe-Flo Silver Solder will flow through the entire joint. Apply heat to one side of the joint and solder wire to the other. Never heat the solder wire itself.
4. Solder is drawn into the joint by capillary action and a bead of solder will form around the joint when it's filled. When the bead appears, you know the joint is completed.
5. Be careful when wiping away the excess solder and flux residue that is left on the joint. Although the pipe may appear to be cool, always use a damp cloth to remove the excess solder and flux residue. Never touch the pipe without allowing it to cool.

Oils, Lubricants and Hand Cleaners

Our Oatey® and Hercules® cutting oils outperform the competition in four key areas: cutting efficiency (tap and drill test); in-use temperature and power requirements; fewest nicks and wearability on tools; and cutting the cleanest threads.

FEATURED PRODUCTS

Hercules® for Hands™ (see page 57)

Say Goodbye to Dirty "Plumber's Hands"

These pre-moistened hand cleaning towels are specifically formulated for plumbers. Anti-bacterial and ready-to-use, the towels remove industrial paints, lubricants, adhesives, tar, printer's ink, sealants, grease, oil, grime, caulks, flux and other stubborn soils. They also soften and remove plastic pipe cement. Use them for any dirty job!

Hercules for Hands towels are a safe alternative to products with harsh skin-drying solvents or abrasive particles. They contain skin-conditioning aloe vera, lanolin and vitamin E. The 12" x 10" towels are rugged, and won't shred or leave residue on hands and can also be used to clean many other surfaces (see label precautions). Each container features a unique, patented storage lid that keeps all remaining towels moist.

Heating Chemicals and Anti-Freeze

A well-maintained hydronic heating system provides reliable performance even during the harshest winters. Heating maintenance professionals know that top quality materials are critical to achieve superior performance. That's why contractors depend on Hercules maintenance and stop-leak products. They are formulated for high performance and developed with both the user and the environment in mind. Hercules "clean and friendly" furnace cement is the latest example of this commitment. Its patented formula is the first and only to meet OSHA's requirement of less than .1% crystalline silica.

Hercules® Cryo-Tek Solar System™ (see page 67)

Anti-Freeze for Solar Panel Systems

Hercules® introduces **CRYO-TEK Solar System™ Anti-Freeze**, specially formulated for closed loop anti-freeze heat exchanger systems. It contains virgin propylene glycol and high purity triple protection additives, which stabilize pH to prevent acid corrosion, chelate hard water minerals and inhibit scale formation and sediment. CRYO-TEK Solar System can also be used in radiant tube heating systems and geothermal loops. Solar System Anti-Freeze is compatible with PEX and elastomeric radiant tubing, commonly used materials for seals and bushings, and provides corrosion protection for aluminum, steel, stainless steel, rubber and most plastic components. Solar System Anti-Freeze is a 94-98% efficient heat transfer solution in most application dilutions. Available in 5 gallon buckets or 55 gallon drums. See Specification Sheet for details on www.herchem.com.

SHOWER PAN LINER – APPLICATION INSTRUCTIONS

Oatey® provides several products needed for tile shower installations. Choose from the list below before you start your project:

PVC or CPE Pan Liner – referred to as pan liner or membrane in our instructions.

Tile Shower Drain – PVC for PVC drain pipe or ABS for ABS drain pipe. Each is available with stainless steel, polished brass or white plastic strainer.

X-15 or CPE (Oateyweld) bonding adhesive – For use on dam corners or seaming use X-15 for PVC and Oateyweld for CPE.

PVC or ABS solvent cement – PVC solvent cement and primer for PVC drainage systems or ABS solvent cement for ABS drainage systems. Use the appropriate cement (and primer for PVC) to solvent weld tile shower drain to the drain pipe.

Dam Corners – For outside corners and over the curb preformed dam corners are available, which can be used for PVC or CPE pan liner applications.

NOTE: Oatey pan liner instructions assume the shower framing has been constructed and the flooring is plywood. Generally the same principles apply to concrete flooring where the sloped mortar bed is applied beneath the pan liner. Also the instructions apply to either PVC pan liner or CPE pan liner which are installed the same with the exception of the bonding adhesive used for seaming and dam corner applications. If you have questions regarding pan liner installation that are not covered in these instructions, contact Oatey customer service at 800-321-9532 and you will be referred to someone who can assist you.

Shower Pan Installation

1. For typical wood subfloor cut a 4.5" diameter hole in the center of the shower floor where the tile shower drain would normally be positioned. Disassemble the tile shower drain. Lay the tile shower drain base in the opening so the flange of the drain base rests on top of the subfloor. Solvent weld the drain base to the drain pipe using the appropriate solvent cement. See Figure A.
2. Cover the drain base opening with duct tape to keep debris from entering the drain. Begin by applying Portland Sand/Cement mixture mortar bed over the subfloor at 1/4" per foot slope from the wall framing to the top of, but not over, the drain base. After this step the sloped mortar bed should be flush with the top surface of the drain base.

Figure A

3. After the sloped mortar bed has cured, the pan liner dimensions need to be determined. Pan liner dimensions should be sufficient to completely cover the floor, turn up all sidewalls at least 2" above the finished curb height, and adequately cover the curb. Lay the pan liner on a clean floor surface, measure, and cut to the appropriate dimensions. **NOTE: Seaming may be required in larger showers. See Figure B. Follow instructions on bonding adhesive.**

Figure B

4. Before installing the pan liner remove the tape from the drain base and apply a 1/4"-3/8" bead of 100% silicone caulk around the upper surface of the drain base approximately 1" in from the outside edge. This will provide a seal between the underside of the pan liner and the drain base surface. Screw the clamping ring bolts into the drain base to 2-3 thread depth. Before the caulk dries lay the premeasured pan liner on the floor and over the drain body. At the top of each bolt slit an "X" so the pan liner slides over the bolts and down to the drain base surface. Press pan liner firmly into place to ensure a seal between the drain base and the bottom surface of the pan liner.

SHOWER PAN LINER – APPLICATION INSTRUCTIONS

5. Work the pan material from the drain body to the sidewall framing and curb threshold so it lays flat on the floor surface. If desired an adhesive can be used to bond pan liner to the floor and curb. Prior to use of adhesive, confirm compatibility of adhesive to the pan liner. Fold corners and nail or staple pan liner to the sidewall framing or wall studs 1/2" below the upper edge of the material to hold it in place. Nail or staple the remainder of the pan liner to the sidewall framing or wall studs 1/2" below the upper edge of the material. See Figure C.
6. For outside corners or curbs where it's necessary to cut the pan liner use a dam corner to cover the cut area. To bond dam corners in the cut area use X-15 for PVC liner installations or Oateyweld for CPE liner installations. See Figure D.
7. Locate where the drain hole is on the drain base and cut out the pan liner material to the dimension of the drain hole on the drain base. Place clamping ring over the bolts and slide the ring counter clockwise so it's locked in place. Tighten the bolts so they're snug. Make sure the weep holes are clear of any residual pan liner material or silicone. **NOTE: The clamping ring can increase the height of the finished shower floor by approximately 3/4". You will see the extension if you turn the ring upside down. Simply tighten it to the drain base the way you normally would, only inverted.**
8. Water test the installation by closing off the drain pipe opening with a pneumatic or mechanical test plug. Fill the shower floor with water just below the top of the curb and let it sit for four (4) hours. Observe for leaks and repair if necessary. Retest the installation. Repeat until the installation is leak free. Completely drain the water before proceeding to Step 9.
9. A reinforcement bed of mortar needs to be applied over the membrane (see step 11) but before doing so nail water impervious drywall to the wall studs to approximately 1" above the pan liner surface. **NOTE: The use of mortar vs. drywall for the curb should be considered because you can avoid the use of nails as you construct this part of your installation.**
10. The clamping ring has an inner thread pattern that will accept the drain barrel and strainer assembly. Once you determine the finished height of the shower thread the drain barrel into the inside clamping ring thread so the finished floor will be flush with the top of the drain barrel. As mentioned in step 7 you can increase the shower drain height by inverting the clamping ring.
11. Before the final mortar application place some pea gravel over the weep holes so the mortar doesn't completely cover them. Now lay the minimum 1-1/2" reinforcement mortar bed of concrete over the pan liner from the wall to the drain barrel, leaving enough room for the final thinset and tile application. See Figure E.

Flashings

Oatey® invented the flashing industry nearly 100 years ago. Today Oatey flashings are used in commercial and residential applications where a water-tight seal around plumbing vent pipe or outside wall penetrations is required. Flashings are available in a variety of thermoplastic, aluminum, galvanized and copper materials. All Oatey flashings are rated for a minimum of 180°F continuous heat.

NEW PRODUCTS

Oatey® SideFlash™ Seals Pipe Penetrations Through Outside Walls (see page 112)

Effective Side Flashing Installs Quickly

The **Oatey SideFlash** is designed to seal around piping penetrations through outside walls. The product features a hard plastic panel with an elastomeric collar that seals around the pipe. It is designed to be installed under the house wrap or building paper to become part of the building envelope.

- **Tear-out collar** enables just two products to fit pipes from ½" to 6".
- **Faster, less expensive and longer lasting** than caulking/foam.
- **Prevents moisture** from intruding to limit mold growth.
- **Seals against air penetration** to reduce energy costs.
- **Won't fade, crack or rust.**
- **Prevents bugs and vermin** from entering the home.
- **Rated to 180° F.**

Oatey® Aurora™ Solar Flashing (see page 112)

For Solar Mounting Systems

Oatey No-Calk® Solar Flashings are designed to flash around solar mounting systems. The products consist of a metal base with an elastomeric collar that incorporates a unique tear out feature enabling it to snugly fit most common mounting systems. The flashing bases are available in aluminum, soft aluminum or galvanized metal to accommodate all different roofing materials.

- **Two items flash ½" to 3" penetrations.**
- **Seals and prevents moisture from collecting** without messy caulk or silicone.
- **Easy and fast to install.**
- **Collar designed** to fit with minimal stress.
- **Seals against insects and vermin.**
- **Flashings won't fade, crack or rust.**
- **Low profile, clean appearance.**

Sideflash™ Vertical Flashings

- Used in commercial and residential applications where a water-tight seal of piping penetrations through outside walls is required.
- Designed with a tear out collar to accommodate pipe size use from 1/2" to 2-1/2" or 3" to 6".
- 180°F continuous heat and approved for type B installations.

Air Admittance Valves (AAV)

Sensitivity to pressure changes, combined with its ability to consistently open and close, is what distinguishes the Oatey® Sure-Vent® AAV from all others. Superior engineering along with stringent quality standards ensure a lifetime of unmatched performance. Available in 6, 20, 160, and 500 DFU.

CATEGORY **13** AIR ADMITTANCE VALVES (AAV)

NEW Sure-Vent® AAV Wall Box (see pages 120)

When combined with 6 or 20 DFU air admittance valves, the **Oatey Sure-Vent AAV** wall boxes are a convenient solution for recessed installations. The high-impact polystyrene construction accommodates 1-1/2" to 2" adapters through the box opening while the textured grille faceplate conceals the AAV, providing a professional looking finish.

- **AAV mounts inside the wall box to the DWV system** via a 2" diameter molded-in drain port.
- **Box accommodates 6 or 20 DFU AAVs** with 1-1/2" or 2" adapters.
- **New smaller size** – 4-1/2" x 5-3/4" box for tight areas.
- **Adjustable faceplate** mounting with any wall finish provides a clean look.
- **Box and faceplate made from high-impact polystyrene.**
- **Available with PVC or ABS adapters.**
- **UPC listed.**

DRAIN, WASTE AND VENT

Traditional Vented House

AAV Vented House

Plumbing Drain, Waste and Vent systems, known as DWV, consist of the DRAIN pipes that provide a network for the removal of WASTE and the VENT pipes that prevent traps from siphoning and maintain an equalized pressure. The DWV system uses gravity and air displacement throughout the piping network to function and breathe. In a simplified example, water in an inverted bottle without an air hole will glug and gasp when emptied. Adding an opening to the bottom of the bottle will turn the process into an efficient, steady flow because the bottle "breathes."

Every Drain Needs a Trap. Every Trap Needs a Vent.

To prevent sewer gases from being released into the structure, plumbing code requires a trap to be installed at every fixture. A trap is a U-shaped bend of pipe filled with water that acts as a barrier between the structure and the sewer system. Trap seals can only be compromised under two conditions – high sewer pressures and water siphons, in both cases vents prevent this from happening.

Under high sewer pressures without a vent, trap seals will allow sewer gases to escape and enter the structure. This happens when the sewer pressure is greater than the pressure from the column of water in the trap. A vent will keep the sewer and atmospheric pressures equalized to maintain the trap seal.

Water moving through pipes can create a negative pressure or a siphon. The siphon will pull the water from a trap, leaving a clear path for sewer gases to enter the structure. A vent will prohibit siphoning, maintaining the trap seal.

Why Use a Sure-Vent® Air Admittance Valve?

Air Admittance Valves (AAVs) open and close in conjunction with normal DWV system operation, effectively eliminating the need for secondary vent pipes. An AAV provides an alternative to secondary venting when utilized within the scope of model plumbing codes, referenced standards and Oatey® installation instructions.

AAVs provide the ideal venting solution for island sinks, remote bathroom groups and remodeling jobs by eliminating the need to tie into a stack vent.

AAVs are often more economical than running vent pipe in new construction because they reduce the added need for supplies and labor.

The Oatey Sure-Vent offers UNMATCHED PERFORMANCE by opening and closing under the smallest pressures, multiple sizes for OPTIMIZED DFUs and SUPERIOR SEALING technology, providing a lifetime of reliability.

Pipe Support

Oatey® offers a complete range of pipe support products for all of your application needs. Whether it's securing supply lines, DWV pipe or supporting your work with brackets and bars, you can count on Oatey for quality, performance and innovation.

NEW PRODUCTS

Ultimate Efficiency – NEW DuoFit™ Clamp Fits both ½" and ¾" Pipe (see page 125)

The **Oatey® Duo-Fit** clamp is designed to hold ½" or ¾" pipe with one clamp. They can be used with copper, CPVC or PEX pipe and provide the versatility you need when mounting pipe vertically or horizontal. Move the pre-loaded nail and you can keep pipe off the stud and allow for expansion and contraction of the pipe system. They install easily and hold the pipe securely at any angle, unlike competing clamps.

- **Efficient – Use one clamp for two different size pipes.**
- **Nails are pre-loaded for fast installation.**
- **Mounts easily in tight areas using various nail angles.**
- **Can be used on copper, CPVC or PEX pipe systems.**
- **Temperature range 0°F to 230°F.**
- **Constructed using black polypropylene.**
- **Can be used with hydronic systems.**
- **IAPMO certified.**

NEW!
From Oatey®

NEW Stand-Off™ Clamp Keeps Pipe Off Studs for Reduced Noise (see page 125)

The **Oatey® Stand-Off™** pipe clamp is designed to hold ½", ¾" and 1" pipe completely off the stud or mounting surface, producing less noise while maximizing pipe protection. The clamps can be used with copper, CPVC or PEX pipe and provide the versatility you need when mounting pipe vertically or horizontally.

Pre-loaded nail provides fast and easy installation.

- **Holds pipe off the stud to minimize noise and protect the pipe.**
- **Nails are pre-loaded for fast installation.**
- **Mounts easily in tight areas using various nail angles.**
- **Can be used on copper, CPVC or PEX pipe systems.**
- **Made from high impact polypropylene.**
- **Temperature range -60°F to 160°F.**

Improved J-Hook Design Holds Pipe in Place More Securely (see page 128)

Oatey® J-Hooks are designed to hold and support 1-1/2" - 4" drain, waste or vent (DWV) pipes. The locking finger allows DWV pipes to be held in inverted applications, while the pre-loaded nails make it easier to install. A new diagonal nail path makes it much easier to hammer in tighter areas. Additional holes allow securing cable ties and other fasteners.

- Nails are pre-loaded for fast installation.
- Exclusive locking finger for mounting DWV pipe in any angle.
- Can be used in tight areas.
- Can be used above or below the joist for running DWV pipes.
- Constructed using black and white ABS
- Temperature range -40°F to 180°F.

Bucket o' Savings – DuoFit™ and Stand-Off™ Clamps in 2 Gallon Buckets (see page 125)

No need to break the bank when buying a bucket of clamps from Oatey®. You can now get your favorite Duo-Fit and Stand-Off clamps in a handy 2.1 gallon Oatey bucket. The bucket holds 300-500 clamps depending on the size and type. And each bucket features a unique reclosable lid. No need to cut a hole in the lid like other buckets force you to do, tearing your hand up in the process of grabbing a handful of clamps. Better yet, when the bucket is empty, it makes a great storage container, or is useful when working on plumbing under sinks and tight areas where bigger buckets just can't fit.

- Smaller size bucket saves you money, more versatile.
- Reclosable lid is easy on the hands.
- Holds 400 DuoFit clamps.
- Holds 500 1/2" Stand-Off clamps.
- Holds 300 3/4" Stand-Off clamps.

Brass, Plastic and Commercial Tubular/Grab Bars

If you need brass, plastic or commercial tubular products, Dearborn has what you are looking for. There are literally hundreds of parts to choose from: P-traps, S-traps, J-bends, waste arms, extension tubes, grab bars and much more.

NEW PRODUCTS

Build a Better P-Trap – with Made in the USA, Premium TRUE BLUE® Washers (see page 153)

Dearborn Brass® offers a complete line of lightweight and dependable plastic tubular products for all installations in 1-1/4" and 1-1/2" sizes. Dearborn tubular meets the industry standards and provides consistent quality and reliability. All of our P-traps include TRUE BLUE premium washers. These washers incorporate a specially formulated blue Thermoplastic Elastomer (TPE) to prevent drying out and cracking. The material has superior flex fatigue resistance and extends the life of the product. Better yet, the TPE is flexible, easier to install and provides a secure seal with simple hand tightening.

- **Ultra flexible elastomer washer combined** with the tapered design provides ultimate leak protection.
- **Superior flex fatigue resistance** extends the life of the product.
- **TPE advanced properties** allows washer to retain its shape when compared to traditional rubber.
- **Doesn't dry out or crack**, providing long, leak-free protection.
- **TRUE BLUE washers are made in the United States.**
- **IAPMO listed.**

Complete Garbage Disposal Kit for Double Sink (see page 151)

Insist on the **Dearborn Brass® Garbage Disposal Kit** for years of trouble-free use from your garbage disposal. The kit comes complete with a P-trap, waste line to the wall, connection to the disposal, connection to the non-disposal sink, an optional adapter for the dishwasher discharge hose and all the nuts and washers you need to do the job. Ultra flexible elastomer washer combined with the tapered design provides ultimate leak protection.

- **Complete kit means you don't have to piece together components**, potentially leading to poor seals and possible leaks.
- **Polypropylene tubular is easy to cut to length**, making it easy to fit any sink type or configuration.
- **Non-metallic components are corrosion resistant**, lightweight and impervious to most household cleaners and chemicals.

Pneumatic Pipe Plugs

Cherne® pneumatic Test Ball® and Muni-Ball® pipe plugs have been the contractor's choice for more than 55 years. Used in residential DWV systems, sanitary/storm sewers, Cherne® pneumatic pipe plugs do it all! Larger sizes are available with our patented Rupture Disc Technology, which prevents over-inflation. This eliminates plug damage due to over-inflation and enhances user safety.

NEW and Improved I-Series® Plugs (see page 183)

The **Cherne® I-Series®** plugs include several enhancements to make the product easier and safer to operate. Its smaller deflated diameter makes it easier to insert into tight manhole openings, while improved hardware adds strength over competing products.

Design Changes on Plugs 24-48" an Larger

- **New 3/4" eyebolts** for added strength.
- **Shorter overall length** makes it more maneuverable.
- **Additional bypass sizes available – now offering 6" and 8" bypasses on larger sizes** for better flow rates.
- **All plugs feature our patented, field-repairable, Rupture Disc technology**, which eliminates the risk and danger of over-inflation due to faulty gauges or user error.

I-Series® Plugs

- Smaller deflated diameter.
- Improved hardware for more strength.
- Shorter length.
- Additional bypass sizes available.
- 20-40" and larger sizes feature patented, field-repairable rupture disc technology to eliminate over-inflation risk

Mechanical Pipe Plugs

Cherne® mechanical test plugs can be used in a wide variety of applications including DWV and stack testing. With a variety of end-of-pipe and in-pipe options available, it's easy to find the right mechanical test plug for the job.

Gripper® Mechanical Plugs

- Ideal for plumbing system tests.
- Easy to install with extra-large wing nut.
- Inside of pipe seals inside pipe as far as needed.
- Made with glass-reinforced ABS plastic.
- End-of-pipe seals only at the end of a pipe, preventing plug from falling into stack.

This data is applicable only for new piping installations and not recommended for repair or cut-ins on hot and cold mwater distribution systems. Please contact Oatey Technical Service for recommendations on Cure Times for such applications.

DO NOT test PVC and CPVC piping systems with compressed air or gas.

Notes: Cure schedule is the time required before pressure testing the system

- This chart can be used as a guideline to determine joint cure
- Cure times stated are for conditions with relative humidity of 60% or less
- + In damp or humid weather allow 50% additional cure time
