A GUIDE TO NAILS

Spiral Standard Nail | Clou spiralle norme

Flat heads-diamond points. These nails are used for general building purposes where ease of driving and increased holding power is desired.

Common Nails | Clous Courants

Common Nail. As the name suggests, these are your everyday nails. Used for rough construction work, the common nail can be purchased in lengths varying from one to six inches (2d to 60d). The largest common nails are colloquially known as spikes.

Finishing Nail | Clou de Finition

Common Nail. As the name suggests, these are your everyday nails. Used for rough construction work, the common nail can be purchased in lengths varying from one to six inches (2d to 60d). The largest common nails are colloquially known as spikes.

Concrete Nails | Clous à Béton

Several types of concrete (masonry) nails are sold; all are designed to be driven into brick or concrete walls. These hard nails may be rectangular in section or have fluted shafts, but all are hardened to resist bending and breaking as they are driven into almost rock-hard materials. Given the nature of masonry materials, be sure to wear safety glasses or goggles when nailing masonry nails, as flying chips pose a danger to your eyes

Roofing Nails | Clous à Toiture

Roofing nails have disproportionately large, round heads and heavier shafts for their length. They are designed to hold roofing materials in place, in particular composition and asphalt- based materials. In order to resist rust, roofing nails are heavily galvanized or made of aluminum.

Flat Head Brass Wood Screw

Wood Screws are designed for wood applications
Brass is suitable where corrosion resistance is a
primary consideration
Flat head style allows fastener to sit flush to the
surface

Carriage Bolts

A carriage bolt is a type of fastener which is designed to be used with wood, although specialized versions can be used to fasten metal components.

The design of a carriage bolt includes a round head with an externally threaded bolt projecting from it. Underneath the head, a square fitting is mounted.
