# DIAMOND Gutter Shield™

- Pressure Fit Design Makes Installation Easy - No Fasteners Needed
- Easy to Handle 3 and 4 Foot Sections
- Compatible with Asphalt, Tile or Metal Roof System
- Drip Lip Reduces Tiger Striping
- Tested to Handle the Heaviest of Rainfall - Up to 40" per Hour

*US Patent Pending*

- Aluminum with High Impact Powder Coat Finish Reduces Scratching and Cracking
- Available in White, Brown and Black
- Available for 5" and 6" K Style Gutters

For more product details see page 27.

# CATCH-A-Raindrop™

THE HARVESTING RAINWATER COLANDER™

- Collect the rainfall from your rooftop
- Filter any large or coarse debris from the downspout
- Store the rain in barrels or connect to hose for directly watering plants
- Reuse the rain to water houseplants, gardens, and landscape, or wash cars

## INCLUDES

- Rainwater Colander with Cap
- Downspout Clip with Zip Screw
- Easy Installation Instructions

- Fits most standard residential downspouts
- Available for 2x3 and 3x4 downspouts
- Small, discrete, and worry-free
- Affordable way to conserve water
- Plants love the pH neutral, fluoride- and chlorine-free water
- Diverts water away from your home's foundation
- Attach to a regular garden hose or use cap

## HOW IT WORKS

The **CATCH-A-Raindrop™ Rainwater Colander™** connects to a vertical downspout and captures 50% of rainwater while debris is directed down the gutter, diverting filtered rainwater into a storage tank or rain barrel, or directly to a garden.

As the water travels down the inside walls of the downspout, the rainwater adheres to the walls of the downspout and does not free-fall from the center. The Rainwater Colander™ installed inside the downspout captures water free of large debris in a 2-inch tall reservoir that has an outlet to attach to a garden hose or cap when not in use. The innovative design of the patented colander automatically diverts rainwater back into the downspout when the rain barrel is full or a cap is attached.

# Gutter Protection

The widest range of products available!

## Plastic

Snap-in Filter

- Fine Mesh Screen
- Fits all Residential Gutters

**High Debris Filtration**  
**New & Existing Roofs**

Snap-in Guard

- High Water flow
- Fits all Residential Gutters

**Excellent water flow**  
**New & Existing Roofs**

Gutter Guard Roll

- Roll of Filter Material
- Use with Gutter Girders

**Great Value**  
**Easy to Install**

Gutter Cover

- Solid Heavy Duty PVC
- Fits 4" - 7" systems

**Professional**

**Commercial quality**  
**Ideal for New Roofs**

## Metal

Diamond Gutter Shield

- Solid Expanded Aluminum
- Locks securely into place

Lock-On Gutter Guard

- Heavy Duty Steel Screen
- Easily snaps into position

Hinged Gutter Guard

- Metal Screen with clips
- Affordable, Classic design

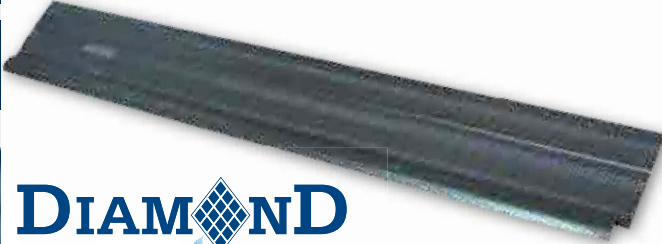

Gutter Shingle

- Powder Coated Steel
- Fits 4" - 7" systems

## Gutter Guards

	<ul style="list-style-type: none"> <li>• Attach to front top lip of gutter where overflows occur</li> <li>• Requires screw or rivet attachment</li> <li>• Use on inside mitres</li> </ul>			

### Note:

The purpose of our Gutter Guard product line is to stop leaves or reduce debris from entering the gutter/eavestrough. Product performance can vary depending on proper installation, product selection, gutter orientation, roof material and slope. Winter weather may cause snow and ice to accumulate at roof eaves. Ice damming can result from improper roof ventilation and inadequate insulation. Heat radiating from below the roof and sun radiation melt snow and it freezes again when temperatures drop below freezing. Icicles can be formed on roof edges due to these conditions whether or not gutters or guards are installed. This is a natural process beyond the manufacturers control and we accept no responsibility for ice and snow accumulation or related consequences.

Leaf Guards are sold as debris protection devices. The manufacturer assumes no responsibility for any other result of this product use.

Colours shown are for reference only.

## Accessories

### Extend-A-Spout™

Description	Carton Qty	Black
Low Profile Drainage System	12	81015
Extender	12	81215

### EXTEND-A-Spout™

- Works with A or B elbow, 2" x 3" or 3" x 4"
- Snap-fit technology for easy installation
- Unobstructed interior flow to prevent clogging
- Beaded seal to avoid leakage
- ½" Dam to eliminate backflow
- Optional Extender increases overall length capacity an additional 30 inches
- Snap-fit design secures the extender in place for long term positioning
- Telescoping feature allows owner to adjust the length that best suits their application
- For more information go to [ExtendASpout.com](http://ExtendASpout.com)

### Catch-A-Raindrop™

Description	Carton Qty	White
2" x 3"	6	37042
3" x 4"	6	37043

- Fits most standard residential downspouts
- Small, discrete, and worry-free
- Affordable way to conserve water
- Plants love the pH neutral, fluoride- and chlorine-free water
- Diverts water away from your home's foundation
- Attach to regular garden hose or use cap
- For more information go to [CatchARaindrop.com](http://CatchARaindrop.com)

### Rodent Guard

Description	Carton Qty	White
2" x 3"	30	37052
3" x 4"	30	37053

- Rodent Guard attaches to the downspout to prevent rodents and other pests from climbing up the downspout and into gutters and entering the attic
- Made of ultra-tough molded Polycarbonate, won't rust
- Won't discolour from sun or chemicals
- Easy to install
- Easy to clean

Colours shown are for reference only.

### SuperScoop™

**SUPERSCOOP™**

#### Description

#### Carton Qty

#### Yellow

Multi Purpose Scoop

12

LY306

- Made of durable plastic resin for long life
- Multi-use around the home
- Rock salt spreading in winter
- Potting soil in summer
- Removes debris from gutters

- Use with any style gutter (metal or vinyl)
- Measurement units inside scoop and handle for use in various residential tasks

### Gutter Wedge

#### Description

#### Carton Qty

#### White

#### Brown

Fascia Fixer

50

T0539

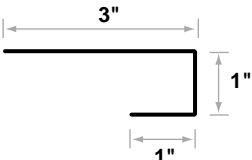

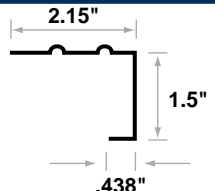

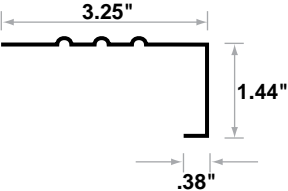

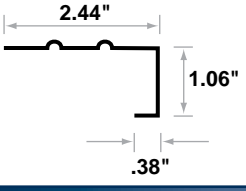

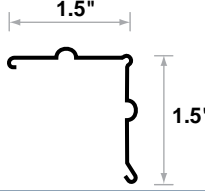

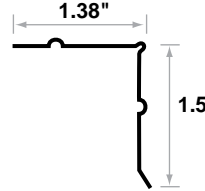

T1539

- Do away with sagging gutters
- Use with 5" or 6" gutters
- Use when fascia board or roof truss is slanted or sloped

## Miscellaneous Flashing

<b>Unpainted Galvanized Ridge Roll Cap (29 ga.)</b>	<i>Description</i>	<i>Pack Qty.</i>	<i>Part No.</i>
	10' x 9"	10	56070

<b>Unpainted Flashing Angle (.0167")</b>	<i>Description</i>	<i>Pack Qty.</i>	<i>Part No.</i>
	120° 10' x 4½" x 4½"	10	54450
	<ul style="list-style-type: none"> <li>• Rust-free aluminum 120 degree angle, used where roof and walls meet. Angle helps weatherproof this area</li> <li>• Use for wall to roof weather-proofing junctions</li> <li>• Cap wood to prevent water damage</li> <li>• Longer length affords fewer seams</li> </ul>		

<b>Unpainted Aluminum Rain Diverter (.020")</b>	<i>Description</i>	<i>Pack Qty.</i>	<i>Part No.</i>
 	60" x 7½" x 2½"	10	54020
	<ul style="list-style-type: none"> <li>• Use over doorways where no gutter is in place</li> <li>• Prevents roof runoff from waterfaling</li> <li>• Rust-free aluminum with hemmed edges for strength and safety</li> </ul>		

<b>Kick-Out Diverter (29 ga.)</b>	<i>Description</i>	<i>Pack Qty.</i>	<i>Part No.</i>
	Unpainted Galvanized Steel	12	KOGA
	White Steel	12	KOWH
	Black Steel	12	KOBL
	Bronze Steel	12	KOBZ
	<ul style="list-style-type: none"> <li>• Meets the IRC 2009 code R905.2.8.3 that requires a 4" vertical Kickout Diverter Sidewall Flashing</li> <li>• Diverts roof drainage away from wall into gutter. Avoids a source of mold problems and foundation damage</li> <li>• Eliminates wall stains at roof line due to uncontrolled rainwater</li> <li>• Electro galvanized steel or powder coated finish to suit your application</li> <li>• Symmetrical construction can be used as Left or Right Diverter</li> <li>• Easy step instructions attached to every KOD flashing bottom face</li> </ul>		

## Pro-Master Ridge Vent™

See page A5 in the Appendix for more product information.

Description	Pack Qty.	Part No.
10½" x ¾" x 20'	1 roll/ctn, 36 ctn/skid	PMRV20
10½" x ¾" x 50'	1 roll/ctn, 16 ctn/skid	PMRV50
<ul style="list-style-type: none"> <li>• An economic and efficient way to ventilate your attic</li> <li>• Easy to install and nail</li> <li>• Nails included - both hand and power</li> </ul>		

## AccuVent®

For proper airflow, an attic requires soffit vents at the eaves and a ridge vent at the roof peak. If soffits are blocked with insulation, airflow is blocked. Accuventes help ensure proper attic ventilation by keeping soffits clear of insulation.

Description	Pack Qty.	Part No.
Soffit Insulation Baffle	50 pcs/bundle, 56 bundles/skid	ACCUVENT
<ul style="list-style-type: none"> <li>• AccuVent is 22.5" x 41" and is designed for all attic applications</li> <li>• Installs with just 6 staples</li> <li>• Perforated to adapt for varied roof truss spacing</li> <li>• Provides efficient airflow</li> <li>• Quick &amp; easy installation, reduces costs of labor</li> <li>• Prevents insulation drifting</li> <li>• Prevents callbacks</li> <li>• 100% Recycled PVC</li> <li>• Meets building code requirements</li> </ul>

### POSTS, CAPS & TRIM

#### Colonial Turned Posts

- 4x4 Colonial posts available in 2 heights
- Heavy duty premium vinyl
- Only mounts on KP0SP4 Anchors, not over 4x4 wood post

Description	White	Clay	Sand
39" Colonial Post	P0C36	-	-
45" Colonial Post	P0C42	-	-

#### Structural Porch Posts

- 5" x 5" x 108" Structural Porch Posts
- Includes painted mounting plates and all fasteners
- Meets building code requirements for loading bearing and uplift resistance

Description	White	Clay	Sand
Classic	P0PP22	P3PP22	P5PP22
Colonial	P0PP21	P3PP21	P5PP21

#### Post Caps and Trim

- Universal Post Trim and Solar Lighted Cap fit 4" x 4" and 5" x 5" posts
- Solar Lighted Cap backed by 2-year warranty!
- Four LEDs, over-sized solar panel - up to 12 hours of night lighting!

Description	White	Clay	Sand
Universal Post Trim	P0F1U	P3F1U	P5F1U

## Snow Guards for Shingle, Slate, Synthetic Slate, Tile and Shake Roofing

See page A7 in the Appendix for information on snow guard installation and warranty.

**Snow Guards are intended to prevent snow movement and provide for the controlled melt and breakdown of the snow mass into smaller sections, reducing the potential for snow and ice damage to gutters, foundation plantings, parked vehicles, adjacent roofs and equipment, and injury to pedestrians.**

Description	Pack Qty.	Available Colours and Part Numbers	
		Part Number	Available Colours/Materials
	#100 HP		
	12	85072009	Stainless Steel
	12	SGC100HP	Copper
<b>#100HP</b> - This economical guard is attached to a shorter, solid bar/strap, and is designed for easy installation on shingle roofs			
	#100 Snow Guard Assembly		
	50	SGC100	Copper
	50	SGS100	Stainless Steel
	50	SGG100	Galvanized
<b>#100 Assembly</b> - This guard has eliminated the necessity of removing slate, avoiding the possibility of breakage. Simply insert the slotted bar under the slate or shingle, engage a nail with one of the conveniently placed slots and pull down to fully secure bar. This style snow guard provides fast installation and is ideal for existing or new construction applications with asphalt shingled roofs.			
	Pro 100 Snow Guard Assembly for Slate & Asphalt Roofs		
	50	SGCP100	Copper
	50	SGSP100	Stainless Steel
<b>Pro#100</b> - This heavy-duty snow guard is available in copper and stainless steel for corrugated, flat, slate and asphalt shingled roofs. The superior design of the Pro 100 includes a 1-inch gusset that reinforces the shoe, which makes this snow guard 5 times stronger than traditional residential snow guards. Simply insert the slotted bar under the slate or shingle, engage a nail with one of the conveniently placed slots and pull to fully secure the bar. This style guard provides fast installation and is ideal for existing or new construction application with asphalt shingled roofs.			
	#2 Snow Guard Assembly for Slate Roofs (Heavy Duty)		
	50	SGML-2	Galvanized Malleable Iron
	50	SGBR-2	Bronze
<b>#2</b> - This heavy-duty snow guard is available galvanized malleable iron and bronze. It is normally installed during the slate roof application, but is fit for use with wood shake, tile and mineral surfaced shingles. This is not a retrofit product.			
	#95 Snow Guard Assembly for Slate Roofs (Heavy Duty Ornamental)		
	30	SGML95	Galvanized Malleable Iron
	30	SGBR95	Bronze
	30	SGAL95	Aluminum
<b>#95</b> - This heavy-duty guard with Gothic styling designed to transfer snow and ice loads more effectively to reduce cracking of the slate. It is normally installed during the slate roof application, but is fit for use with wood shake, tile and mineral surfaced shingles. Excellent in areas that receive heavy snows! This is not a retrofit product.			

## Snow Guards for Shingle, Slate, Synthetic Slate, Tile and Shake Roofing

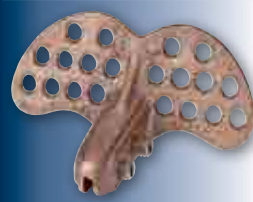

See page A7 in the Appendix for information on snow guard installation and warranty.

*Typical spacing for shingle, slate, synthetic slate, tile and shake roofing*

*Do not place Snow Guards beyond the bearing wall on an extended roof section. Appendix page A7 for general installation information.*

## Snow Guards for Metal Roofs

Description	Pack Qty.	Available Colours and Part Numbers	
		Part Number	Available Colours/Materials
 RT Snow Guard (For Standing Seam Metal Roofs- Seam Mounted) RT-200 - 0.188" ( $\frac{3}{16}$ ") wide and 1.125" tall  RT300 - 0.28" ( $\frac{9}{32}$ ") wide and 1.125" tall	100	RT200M	Mill Finish Aluminum
	100	RT200E	E-Coat Black Primer
	100	RT200B	Bronze
	100	RT200C	Custom Colours
	100	RT300M	Mill Finish Aluminum
	100	RT300E	E-Coat Black Primer
	100	RT300B	Bronze
	100	RT300C	Custom Colours
<i>Custom Colour Orders have a three week lead time AND are not subject to returns or cancellations</i>			
<b>RT Snow Guards</b> are non-penetrating devices which are secured to the standing seams of metal roofs utilizing stainless steel set screws to clamp them in place and will not restrict thermal movement. Available in mill finish, primer finish and cast bronze (for copper roofs), they are particularly suited to double-lock and mechanically seamed metal roofing. <b>RT-200:</b> will accommodate seams up to 0.188" ( $\frac{3}{16}$ ") wide and 1.125" tall. <b>RT-300:</b> will accommodate seams up to 0.28" ( $\frac{9}{32}$ ") wide and 1.125" tall			

## Snow Guards for Metal Roofs

See page A7 in the Appendix for information on snow guard installation and warranty.

Description	Pack Qty.	Available Colours and Part Numbers		
		Part Number	Available Colours/Materials	
	AP Snow Guard			
	AP-400 0.40" (3/8") wide and 1.75" tall	50	AP400M	Mill Finish Aluminum
		50	AP400E	E-Coat Black Primer
		50	AP400C	Custom Colours
	AP-516 0.516 (1/2") wide and 1.75" tall	50	AP516M	Mill Finish Aluminum
		50	AP516E	E-Coat Black Primer
		50	AP516C	Custom Colours
Custom Colour Orders have a three week lead time AND are not subject to returns or cancellations				
<b>AP</b> Snow Guards are non-penetrating devices which are secured to the standing seams of metal roofs utilizing stainless steel set screws to clamp them in place and will not restrict thermal movement. The wide, deep blade design makes it particularly effective in retaining snow with the higher seams and wider panel widths common in preformed architectural roofing. <b>AP-400M</b> will accommodate seams up to 0.40" (3/8") wide and 1.75" tall <b>AP-516M</b> will accommodate seams up to 0.516" (1/2") wide and 1.75" tall				
	SL-1 Snow Guard			
		50	SL-1MF	Mill Finish Aluminum
		50	SL-1EBK	E-Coat Black Primer
		50	SL-1C	Custom Colours
Custom Colour Orders have a three week lead time AND are not subject to returns or cancellations				
<b>SL-1</b> - This popular snow retention product is designed to fit 1" Snap Lock Panel. The throat width has been increased to 41/64" (0.64") and a leg lip has been added to allow the guard to "snap" over the seam for a smooth and quick installation.				
	SM Snow Guard Surface Mount (Surface Mounted)			
		50	SMMFSG	Mill Finish Aluminum
		50	SMEASG	E-Coat Primer
		50	SMCASG	Custom Colours
Custom Colour Orders have a three week lead time AND are not subject to returns or cancellations				
<b>SM</b> - Surface Mount Snow Guards are manufactured of cast aluminum and are designed to be adhered to the pan surface of prefinished metal roofs using either a high strength construction adhesive or a combination of mechanical fasteners and an adhesive/sealant. They are particularly effective in retaining snow and ice on metal roofs where there are no suitable seams to which a seam mounted device can be fastened, including batten and cap seam panels.				
	640 Snow Guard			
			640M	Mill Finish Aluminum
			640E	E-Coat Black Primer
			640C	Custom Colours
Custom Colour Orders have a three week lead time AND are not subject to returns or cancellations				
<b>640</b> - These are designed to fit between the stiffening ribs of residential metal roof panels. They have a low visibility and can be custom painted to blend with roof materials. They can be attached with adhesives, screws or a combination of both. Not for use with panels with seams or ribs more than 12 inches apart.				
	Clear Snow Guard Structural Rib	50	RTCLSR	Clear Plastic
	Clear Snow Guard Surface Mount	50	RTCLSM	Clear Plastic
<b>CLear</b> Snow Guards are manufactured in a high clarity polycarbonate plastic with U.V. stabilizers which provide strength and longevity. The Structural Rib guard is designed to fit over stiffening rib on residential panels. The Surface Mount are particularly effective in retaining snow and ice on metal roofs where there are no suitable seams to which a seam mounted device can be fastened, including batten and cap seam panels. Both have a low visibility and blend with roof materials and can be attached with adhesives, screws or a combination of both.				
	#100 Snow Guard for Flat Metal Roofs (Surface Mounted)			
		50	SG-CPS	Copper
		50	SG-SSS	Stainless Steel
<b>#100 Shoe</b> - Ideal for mounting to ribbed or flat roof panels. Available in stainless steel and copper (for copper roofs) they can be mechanically fastened or soldered. Do not use adhesives to secure, only to keep water out. Not for use with panels with seams or ribs more than 12 inches apart.				
	#20 Snow Guards for Metal Corrugated Roofs (Surface Mounted)			
		100	SGBR20	Bronze
		100	SGML20	Galvanized Malleable Iron
<b>#20</b> - Designed to fit the on the crown (top) of 1-1/4" or 2-1/2" rounded corrugated roofing. Use neoprene washer screws to fasten. This is also available in bronze for use on copper roofs. Do not use adhesives to secure, only to keep water out.				

## Snow Guards for Metal Roofs

See page A7 in the Appendix for information on snow guard installation and warranty.

Description	Pack Qty.	Available Colours and Part Numbers	
		Part Number	Available Colours/Materials
	100	RTMINI	Clear Plastic
			<p><b>Mini C</b>lear Snow Guards are manufactured in a high clarity polycarbonate plastic with U.V. stabilizers which provide strength and longevity. These are designed to fit between the stiffening ribs of residential metal roof panels. They have a low visibility and blend with roof materials. They can be attached with adhesives, screws or a combination of both. Not for use with panels with seams or ribs more than 12 inches apart.</p>
	24	SB-190	-
			<p><b>SB-190</b> is a field proven sealant adhesive. This unique formula possesses up to 2000 lbs. of tensile strength, but requires 28 consecutive days (672 consecutive hours) with temperatures of 50 degrees Fahrenheit or greater to fully cure. Under certain conditions, temporary measures may need to be employed to hold the snow guard in place until initial set of adhesive has taken place. One tube will adhere 8-10 CL Snow Guards and 14-16 RTMINI Guards.</p> <p>The adhesives are offered for the convenience of the user who assumes full responsibility for its use. These adhesives are used throughout the industry for adhering snow guards with successful results utilizing the directions of the adhesive manufacturer. Adhesive failure does not constitute Euramax Canada products defect and is not the responsibility of Euramax Canada.</p>

### Typical spacing for shingle, slate, synthetic slate, tile and shake roofing

#### Typical Spacing for Metal Roofing

Horizontal spacing will be dictated but how far apart the metal seams or ribs. Shown is a typical RTMINI application on a 9" or 12" center rib panel. Do not place Snow Guards beyond the bearing wall on an extended roof section. Please see Appendix page A7 for general installation information.

## Aluminum Snow Panels

Snow Panel - 30" x 34¾" (.018)	12	53025
Rake Cap 36"	12	53027
Hardware Pack	12	53029PK
SeamerMate® Sealant	12	85148

**Aluminum Snow Panels** are used to reduce ice damming at the roof's edge. Not for use in valley sections of shingle roofs.

### Completed Snow Panel Installation

• Helps Prevent Snow and Ice Dams along Roof Line • Helps Extend Roof Life

Use SeamerMate® sealant (page 73 for more information)

Wide Flange Pliers Metal Bender (page 75 for more information) being used to crimp panels together.

Colours shown are for reference only. All thicknesses are inches unless otherwise noted. Tolerance is ± .002 inches.

## Point of Purchase

*Euramax Canada offers extensive support with informative POP signage, literature, displays and samples to support selling products at retail.*

*We can help you customize a planogram to suit your needs.*

### Gutter & Accessories Store Sets

- Includes Gutter, downspouts and all system components
- Signage providing installation images

- Tear Pads show installation steps and all system and accessory parts for a complete gutter installation

## Point of Purchase

### Flashing & Trim Coil Store Sets

- Extensive colour choices and gauges
- Tools and adhesives for installation also available
- Colour match for popular vinyl siding and window manufacturers

### Gutter Guard Store Sets

- Gutter Guards for every type of gutter and price point
- Attractive signage
- Great 3 or 4 foot end-cap opportunity

### Gutter Accessories Store Sets

- Gutter Accessories for effective drainage and foundation protection
- Attractive signage
- Great 3 or 4 foot end-cap opportunity

## Gutter Assembly

See pages 5-32 for product ordering information.

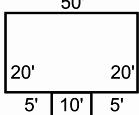

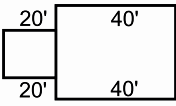

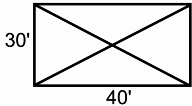

### Things to Consider When Planning Your Roof Drainage System

- 2" round downspout drains 75 gallons a minute
- Standard (2x3) downspout drains 186 gallons a minute
- Commercial (3x4) downspout drains 434 gallons per minute
- 5" gutter systems can use 2x3 or 3x4 downspouts
- 6" gutter systems use 3x4 downspouts only
- Increasing the size or number of downspouts is recommended for large roof areas and/or regions with high rainfall
- See page A3 for Rainfall Intensity Map

For more information visit [EuramaxCanada.com](http://EuramaxCanada.com)

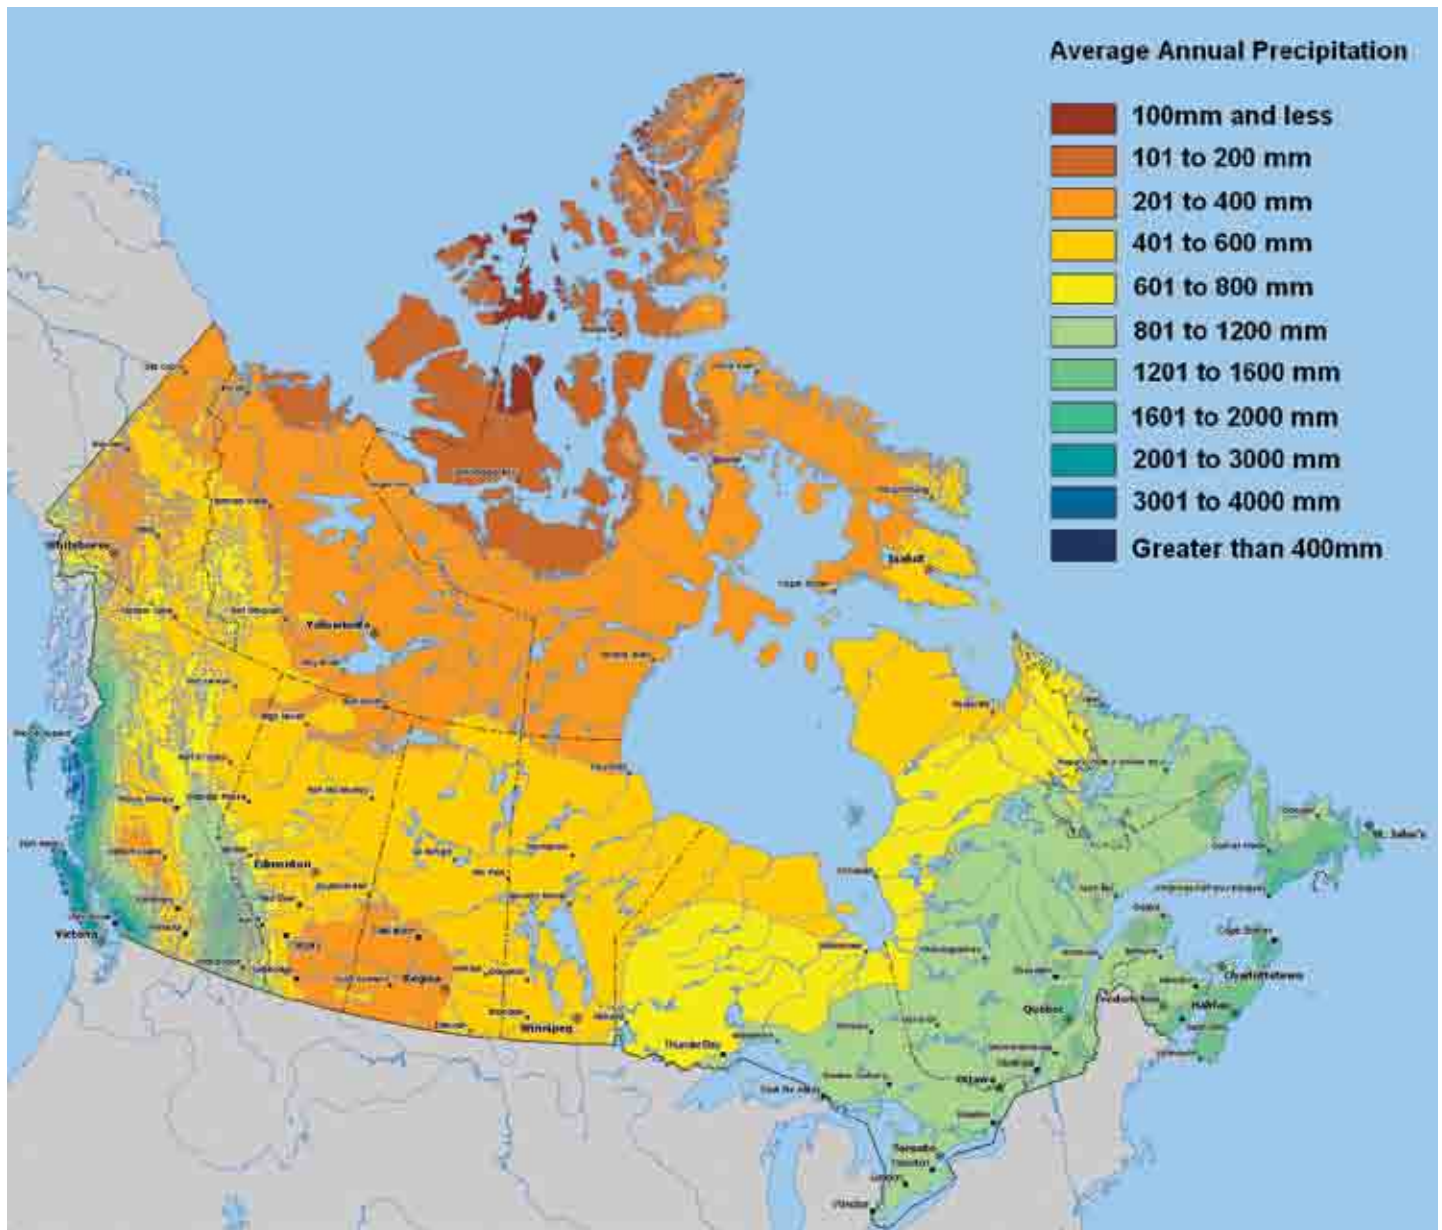

See Roof Drainage Systems section, starting on page 5

## Rainfall Intensity Map

**The areas above show average annual rainfall across Canada. Residential gutters are designed to handle the most intensive rainfall ranging from 75mm to over 150mm of rain during a five minute burst.**

## Popular Hanger Choices

See pages 19-21 for product ordering information.

### Hidden Hanger w/ Screw

*1/4" hex  
head screw,  
power drive in  
fascia board.*

### Hidden Hanger

*Requires  
nail or screw.*

### Hidden Hanger w/Roof Strap

*Only use when  
no fascia board  
exists. Follow  
directions printed  
on hanger bag.*

### Fascia Bracket

*4 per pack  
includes  
hanging nails.*

### Snap Lok Bracket

*Nails or screws  
required. Fasten to  
fascia board along  
sloped string guide line.  
Place gutter into bracket,  
snap top bar into slot  
and front bracket.*

### Spike and Ferrule

*Insert ferrule  
into gutter and  
hammer spike  
through gutter,  
ferrule and  
fascia board.*

### Screw and Ferrule

*Insert ferrule into  
gutter and using the  
bit provided, drill the  
screw through the gutter,  
ferrule and fascia board.*

## Ventilation

See page 57 for product ordering information.

### HOW IMPORTANT IS THE AIR WE BREATHE?

#### Facts

In the US, about 17 million people have asthma and up to 30% of them are sensitive to molds and fungal allergens. (Western Roofing 2001)

It is estimated that 25% of airways disease and 60% of interstitial lung disease may be associated with moisture in the home or work environment, (HUD 2001) and where there is moisture, there is most definitely mold.

#### Symptoms

*A poorly ventilated attic means...*

- |   |   |  |
|---|---|--|
| Increased moisture condensation           | → | Prime condition for the growth of molds and fungal allergens |
| Less effective insulation due to moisture | → | Higher heating bills   |
| Excessive heat build-up                   | → | Higher cooling bills   |
| Shorter lifespan for the roof             | → | Long-term structural degradation of the attic structure      |

### Pro-Master Ridge Vent™

- |                          |                         |                      |
|--------------------------|-------------------------|----------------------|
| 1. Roof Sheathing        | 3. Cap Shingle          | 5. Negative Pressure |
| 2. Roof Saver Ridge Vent | 4. Hot, Moist Attic Air | 6. Exhaust Air       |

Air flow across the exterior roof ridge draws hot, moist attic air out through the Ridge Vent and pulls fresh air into the attic through the soffit vents. Removal of hot, moist air from the attic reduces cooling costs and eliminates potential damage to your roof.

***In today's market homeowners need to know the air they breathe is safe.  
Clean Air Begins in the Attic. Pro-Master Ridge Vent™***

### Pro-Master Ridge Vent™ Benefits

- Deters the growth of mold and mildew
- Keeps attic dry deterring rot and structural degradation
- Green Product- made with RECYCLED post industrial fibre.
- No maintenance or operating cost
- UL Class A Fire Rating
- Eliminates unsightly fans and vents.
- Protects roof and shingles from damage due to excessive heat or condensation.
- Installs quickly - grips the roof!
- Passes 110 mph independent wind driven rain test.
- Non Clogging AC132 dust exposure test
- Most economic and efficient way to ventilate your attic.
- Nails included- both hand and power
- Net free area 15.2 sq. in./lineal foot
- Won't deteriorate or corrode from wind, snow, rain or ice.
- Meets attic ventilation requirements for all nationally recognized building codes
- 40-year warranty

*Vent must be used on roofs with a minimum 3/12 pitch.*

# DrySnap® Under Deck Rain Carrying System

See page 61 for product ordering information.

The **DrySnap®** system is an easy way to create a great outdoor space under residential and light commercial decking.\*

Its five components snap together for maximum efficiency and cost savings.

## Warning:

Barbeque grills, portable propane heaters, fire pits and outdoor fireplaces should not be used under the living space protected by **DrySnap®**. Heat generated from these devices can damage the **DrySnap®**.

## Step #1

Screw joist brackets with pitch spacers attached into joist. Use #8 zip screws (sold separately) to attach dovetail connections.

## Step #2

Snap starter channel to joist bracket.

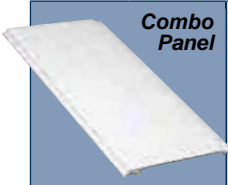

## Step #3

Snap panels into place and finish with trim cap.

For custom deck sizes, gutter installation guidelines, fan/light installation instructions, go to [DrySnap.com](http://DrySnap.com).

For caulking seams, we recommend Amerimax FlashMate®.

\*Standard code approved decking is less than 30 ft. above ground.

## Snow Guard Technical

See pages 66-70 for product ordering information.

**THIS DOCUMENT CONTAINS IMPORTANT SAFETY, WARRANTY AND PRODUCT INFORMATION – READ IT CAREFULLY!**

### RETAIL SNOW GUARD INSTALLATION GUIDELINES

The purpose of a Snow Guard is to help reduce a slide, not stop it. Snow Guards are intended to reduce the potential for snow and ice damage to gutters, foundation plantings, parked vehicles, adjacent roofs and equipment, and injury to pedestrians. Snow Guards are attached to the roof structure in order to uniformly retain and hold snow in place on the roof area. The Snow Guards need to be applied in sufficient quantity and according to a prescribed pattern in order to be effective. Snow Guards are intended to prevent snow movement and provide for the controlled melt and breakdown of the snow mass into smaller sections.

Snow Guard placement will vary from region to region and will be influenced by roof pitch, the lengths of roof runs and roof features. Placement should be determined by a qualified professional. Placement recommendations can be found in Sheet Metal and Air Conditioning Contractor's National Association (SMACNA) Architectural Sheet Metal Manual and other industry standards. The best practice with any installation is to develop a layout aimed at retaining the snow in place rather than trying to stop it at the eaves after it has begun to slide. This principal is particularly important where adhesive mounted devices are to be used. Always consult building codes, architects and/or engineers when roof pitch exceeds 12:12.

A qualified roofing contractor should be employed to install these products. Roofing professionals have the proper equipment, knowledge and ability to complete the task in a safe and satisfactory manner. The installer is responsible for compliance with all governing building and safety regulations. Prior to application, the installer should evaluate all products in order to determine fitness for use.

Positioning of Berger snow guards required for effective use:

The best positioning will vary depending on the particular roof. In general, snow guards should be placed 1 every 40 inches over entire roof or in 2 groups of 3 staggered rows on 30 inch centers with 1 group at the eave and 1 group midway on roof slope. On long slopes, multiple groups with 6 ft. space separation maximum.

- Do not place Snow Guards beyond the bearing wall on an extended roof section. This can result in ice damming and structural damage to the roof.
- Do not use Snow Guards on low-slope roofs (those with pitches less than 3:12). Snow guards help reduce the momentum of a potential snow slide. On low-slope roofs, snow does not typically slide off in the same manner. Under these circumstances, it is often better to allow the snow to naturally clear itself from the roof as quickly as possible or to manually remove it. Therefore, snow guards are not recommended for low-slope roof applications. Check with the roof manufacturer for specific product application limits and, as always, observe all roof safety guidelines.
- Always check metal roofing warranty before mechanically fastening snow guards. Use of mechanically through fastened snow guards on metal roofing may void metal roofing manufacturer's watertight warranty.
- Do not use competing, or dissimilar metals. Galvanic corrosion will occur when dissimilar metals are in contact in the presence of an electrolyte. Water in the form of condensation, rain or snow is an electrolyte. Water that flows over copper becomes electronegative and will cause corrosion of aluminum or steel. Copper, brass or stainless steel fasteners or nails must be used with copper or brass applications. Make sure rivets are solid copper; do not use copper plated steel rivets in copper or brass assembly. Do not use aluminum or galvanized nails to secure any copper products.

Corrosion will be more rapid in the presence of salts such as ocean coastal areas or chlorinated water, acid rain, and polluted industrial atmospheres. Accelerated corrosion will occur when a larger area of an electronegative (cathode/protected) element contacts a small electropositive (anodic/corroded) element.

#### SAFETY WARNINGS

- Roofing can be hazardous! Professional installation is recommended. Observe and comply with all OSHA and other safety standards and codes that apply to roof safety.
- Always use personal safety equipment and work shoes designed for roof traction when roofing to reduce the likelihood of falling.
- In order to reduce the likelihood of falling, always use roof jacks, work supports or platforms to assure safe footing while working on steep pitched roofs.

To prevent roofing materials from slipping or falling off the roof, always ensure roof material staging devices such as roof jacks, storage platforms and toe boards are securely fastened to the deck substructure.

When working with ladders, always follow the ladder safety standards and regulations, observe the locations of all power lines and take precaution to avoid any contact with the workers or equipment

To avoid exposure to hazardous conditions, do not work on the roof during inclement weather (including but not limited to lightning storms, high winds, rain, ice and snow conditions). To avoid heat injuries, ensure adequate rest breaks and drink plenty of water when working in high temperatures.

## **Snow Guard Technical**

### **EURAMAX CANADA, INC.**

#### **SNOW GUARD LIMITED ONE YEAR WARRANTY AND LIMITATION OF LIABILITY**

Euramax Canada, Inc. (hereinafter “AHP” or “Seller”) warrants that this product (excluding the adhesives) shall be free from defects in material and workmanship for one (1) year from the date of purchase. Should any of the products prove defective, the obligation of AHP under this warranty shall be limited to replacement of the defective product, or at its option, the cost of the product originally shipped. Replacement of defective product shall not extend the duration of this limited warranty.

##### **CONDITIONS OF THE WARRANTY**

NO WARRANTIES, EXPRESS OR IMPLIED, SHALL APPLY IF THIS PRODUCT IS INSTALLED ONTO COMPETING OR DISSIMILAR METALS. Galvanic corrosion will occur when dissimilar metals are in contact in the presence of an electrolyte. Water in the form of condensation, rain or snow is an electrolyte. Water that flows over copper becomes electronegative and will cause corrosion of aluminum or steel.

- Copper, brass or stainless steel fasteners or nails must be used with copper or brass applications. Make sure rivets are solid copper;
- Do not use copper plated steel rivets in copper or brass assembly. Do not use aluminum or galvanized nails to secure any copper products.

Corrosion will be more rapid in the presence of salts such as ocean coastal areas or chlorinated water, acid rain, and polluted industrial atmospheres. Accelerated corrosion will occur when a larger area of an electronegative (cathode/protected) element contacts a small electropositive (anodic/corroded) element.

##### **BUYER'S OBLIGATION**

Buyer shall inspect all materials prior to installation so as to mitigate unnecessary expense involved in repairing or replacing defective Snow Guards.

##### **EXCLUSIVE REMEDY**

If, upon inspection by the Seller, it is determined to Seller's reasonable satisfaction that the product is defective, Seller shall have the right to either repair or replace the defective product utilizing such normal materials, methods and workmanship as are needed to fulfill the original performance guarantee but without extending the duration thereof. Seller's liability and Buyer's exclusive remedy under this warranty shall be limited to repair or replacement at the Seller's election. IN FULFILLMENT OF ITS GUARANTEE, SELLER SHALL IN NO EVENT BE LIABLE TO INCUR COSTS WHICH EXCEED SELLER'S COST OF THE DEFECTIVE PRODUCT.

BUYER HEREBY WAIVES ALL REMEDIES NOT EXPRESSLY PROVIDED HEREIN INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR INJURY TO PERSON OR PROPERTY AND INCIDENTAL AND CONSEQUENTIAL DAMAGES.

##### **NO WARRANTY OF FITNESS FOR PARTICULAR PURPOSE**

Due to differences in roof geometry, structural strength, climatic conditions and snow melt rate, the manufacturer does not warrant the suitability of this product for use on a particular structure.

##### **EXCLUSION OF WARRANTIES**

THE LIMITED WARRANTY DESCRIBED HEREIN SHALL BE EXCLUSIVE AND IN LIEU OF ANY AND ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING THE WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. THE SELLER ALSO DISCLAIMS AND BUYER WAIVES ANY LIABILITY OF SELLER IN TORT, STRICT OR OTHERWISE, OR OTHERWISE IN LAW, FOR DAMAGES, DIRECT, INCIDENTAL OR CONSEQUENTIAL, RESULTING FROM A DEFECT IN DESIGN, MATERIAL, WORKMANSHIP, OR MANUFACTURE, WHETHER OR NOT OCCASIONED BY SELLER'S NEGLIGENCE. BBPI IS IN NO EVENT LIABLE FOR INCIDENTAL OR CONSEQUENTIAL DAMAGES, WHETHER THE CLAIM IS BASED ON WARRANTIES, CONTRACT, NEGLIGENCE OR OTHERWISE.

Seller is also not liable for misapplication or modification of this product or incorrect material or defects that were open and obvious at time of installation. AHP is not liable for any consequential damage, schedule delays, additional labor, and or equipment rental costs as a result of open and obvious defects during installation. All warranty claims are limited to AHP's cost of material of the product determined to have a manufacturing defect.

AHP DOES NOT WARRANT THE ADHESIVE INCLUDED WITH THIS PRODUCT. WITH RESPECT TO THE ADHESIVE, AHP DISCLAIMS ALL WARRANTIES, EXPRESS OR IMPLIED, INCLUDING ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. The adhesives are solely for the convenience of the user. BBPI DISCLAIMS ANY RESPONSIBILITY FOR DEFECTS OR FAILURE IN THE ADHESIVES AND THE BUYER HEREBY ASSUMES FULL RESPONSIBILITY FOR ITS USE. The adhesive provided is used throughout the industry for adhering snow guards with successful results when utilized in accordance with the adhesive manufacturer's instructions. Use of the adhesive is recommended only when weather conditions permit, and proper curing is possible per the manufacturer's instructions.

## Gutter FAQ's

### 1. WHY DO I NEED GUTTERS?

- Gutters control roof runoff, protecting your home's foundation from erosion damage
- Gutters prevent water damage to exterior walls and basements
- Gutters add value to your home

### 2. HOW OFTEN SHOULD I CHECK MY GUTTERS?

- You should check your gutters every Spring and Fall for clogs, leaks and gutter pulling away from the house

### 3. HOW DO I KNOW WHAT I NEED?

- Start with the "Gutter Installation Sheet," available at your local store. It explains:
  1. Gutter System components
  2. How to measure
  3. How to install

### 4. WHAT ARE EAVESTROUGHS AND LEADERS?

- Other names for gutters and downspout

### 5. WHAT ARE SEAMLESS GUTTERS?

- Gutters formed at the jobsite from a continuous piece of metal, cut to the required length
- Seamless gutter is the same profile as stick gutter

### 6. WHAT ARE STICK GUTTERS?

- Pre-formed gutter sections; typically sold in 10' lengths
- May also be available in 16', 21' and longer lengths

### 7. WHAT IS "K" STYLE?

- Most-common gutter profile; also called "Ogee."
- Half-round profile is also available

### 8. CAN I MIX METALS (ALUMINUM, STEEL, COPPER) IN MY GUTTER SYSTEM?

- Not recommended. Mixing metals can cause a "galvanic reaction" between the metals, leading to corrosion and premature component failure

### 9. HOW MUCH PITCH IS REQUIRED FOR GUTTER RUNS?

- Minimum slope of 1/4" for every 10' of gutter

### 10. HOW MANY DOWNSPOUTS DO I NEED?

- Recommend one downspout per 20' of gutter. Larger roof areas and/or heavy-rainfall areas may require more downspout

### 11. HOW MANY DOWNSPOUT BANDS/BRACKETS DO I NEED?

- Two for every 10' of downspout

### 12. HOW DO I CUT ALUMINUM GUTTERS AND DOWNSPOUTS?

- A hacksaw or tin snips will work very well

### 13. WHAT'S THE BEST WAY TO HANG GUTTER?

- There are many options. The best one for you depends on where you live and the construction style of your home. Consult an installation professional to determine the best option for you
- The easiest option is to use a hidden hanger with screw. This is an all-in-one hanger that is easily installed, resists loosening over time, provides a hanging solution that is invisible from ground level and is easily maintained

### 14. DO I NEED CAULK AND HOW MUCH?

- Aluminum gutters require SeamerMate® sealant on all seams. Typical usage is 1/2 oz. per seam
- Vinyl gutter connections are self sealing; they don't require any additional sealant

### 15. WHAT'S THE DIFFERENCE BETWEEN A & B ELBOWS?

- A (front) elbows direct water forward or back from the gutter outlet
- B (side) elbows direct water left or right from the gutter outlet

### 16. HOW DO I KEEP MY GUTTERS CLEAN?

- There are lots of easy-to-install options to keep leaves and debris out
- Popular choices include strainers and plastic or metal gutter guards and covers

### 17. HOW DO I REPAIR LEAKING GUTTERS?

- Start by watching the tutorial video in the "How-To" section of our website [EuramaxCanada.com](http://EuramaxCanada.com)

### 18. CAN I PAINT MY GUTTERS?

- Both aluminum and steel gutters can be painted. The most important step is to be sure the gutter surface is properly prepared. Use a surface prep solution like Wil-Bond™ to assure proper paint adhesion
- Consult your local painting professional for the right type of paint for your gutter system
- Vinyl gutters should not be painted

### 19. WHAT'S WARRANTY ON EURAMAX CANADA® GUTTERS?

- See page A12 in the Appendix section of this literature.

### 20. WHERE CAN I BUY EURAMAX CANADA PRODUCTS?

- Euramax Canada products are carried in many leading home centers and hardware retailers throughout the United States and Canada

## Gutter Glossary

**Apron Gutter** Gutter with an additional mounting flange angled behind the top back edge of the gutter.

**"B" Style Outlet** Type of outlet with a narrow-flange top edge. Flat edge for K gutter and radius or curved top to fit the diameter of Half Round Gutter.

**Box Gutter** In residential applications, same as Yankee-built gutter. In commercial applications, a large gutter with plain vertical angled profile and a box bead front edge.

**Clean Out** A section of downspout with a door flap and internal strainer that provides access to clean debris from downspout.

**Combo Hanger** Semi-circle hanger with a riveted mounting plate. Used to hang Half Round Gutter.

**Conductor Head** Fabricated metal casting or molded box, funnel, or ornate shape with a wide top opening. Used to improve the water flow of gutter systems. Sometimes called a scupper.

**Cutoff** A downspout diverter where an external lever controls an internal diverter flap. Directs the water equally to both sides or closes one side off.

**Diverter** Metal or plastic device that changes the flow direction of rain water.

**Downspout** Vertical tube connected to the gutter or drain outlet. Removes water in a downward flow.

**Drop** Another term for a gutter outlet tube.

**Eavestrough** Another term for gutter.

**Elbow** A short section of downspout that has been bent across the midpoint to form an angle that changes the direction of water flow.

**End Cap** Component contoured to match gutter shape and close the open end of a gutter.

**End Drop** A short section of gutter with a preassembled outlet. Typically used to terminate a gutter section. Can also be used to connect long sections of gutter where a midpoint outlet is required.

**Extension** A short length of downspout that is used to extend the downspout either horizontally or vertically.

**Free Floating** Term applied to gutter systems designed to support the gutter without limiting the gutter's ability to expand or contract.

**Funnel** Tapered component that funnels rainwater from two or more higher downspouts into a single lower downspout.

**Gutter** Formed section of downspout with two angles. Used to get around obstacles such as wall ledges.

**Hook Back** Formed channel or trough that collects rainwater from a roof section and directs it to a drain.

**Half Round Gutter** Gutter style that is formed in a semi-circle. Can be Single Bead (SB), Double Bead (DB) or Reversed Bead (RB).

**K Style Gutter** Gutter style with an Ogee curved face, a box top bead and a stepped face bottom.

**Mitre** Gutter component that forms the corner at wall intersections.

**Offset** Formed section of downspout with two angles. Used to get around obstacles such as wall ledges.

**Ogee** A reverse curve shape. Another term for "K" style gutter.

**Outlet** Shaped round, oval or rectangular gutter component that protrudes from the gutter bottom and connects to the downspout or elbow.

**Plug-in Outlet** European style hopper outlet used with Half Round Gutter.

**Connector** Component used to connect two pieces of gutter.

**Straight Back** A gutter with a straight back vertical form and no open hook edge. It can be plain or have a flat hem.

**Tile Adaptor** Used to connect downspout into PVC, cast or tile ground drain pipes.

**Tube** Shaped connector that drains the gutter into an elbow or pipe. See outlet.

**Yankee Gutter** A gutter that is built into the roof below the roof plane or a gutter that is built on top of a cornice at the eave.

## Roof Edge & Trim Styles

See pages 33-48 for product ordering information.

### A & B Style

- Used on the rakes of gable roof ends
- Affords neat even finish
- For replacement and new roofs
- Covers and protects exposed wood sheathing edges from moisture deterioration

### F Style

- Overhang gives maximum protection from roof run-off
- Directs run-off into gutters
- Used along gutter line of roof edge
- Protects and covers roof edge
- For new construction and reroofs
- Acts as a starter strip for a true edge to align shingles

### C Style

- Used along gutter line of roof's edge
- Drip leg extends run-off away from fascia
- Helps direct run-off into gutters
- Covers and protects wood sheathing edges
- Affords neat even finish

### Vinyl

- Slotted every 30" for nailing
- Notched for splicing

### D & E Style

- Metal edges with a 1" to 3" drop
- Protect exposed wood sheathing edges
- For new construction or reroofs

### H Style

- For flat roofs
- Keep gravel from washing off
- Protect wall roof connections
- Gives neat finished appearance

### Roof Apron

- Used with or without gutter
- Slips under shingles
- Extended drop with a drip lip for fascia board protection

### Window & Door Caps

Capping of Window

Capping of Door

- Metal edges cap over door and window frames
- Protect against moisture damage

## We Can Help You!

### Material Estimates - Outdoor Living

Let us make your job a little easier with our **FREE** Material Estimate Service. This service is available for both Yardcrafters™ Railing and DrySnap® systems.

For your convenience, use our on-line request form (url below) that provides the information necessary for us to estimate the materials needed for your project.  
<http://www.euramaxcanada.com/OLmaterialestimate.html>

If you wish to estimate materials yourself, use the Yardcrafters Planning Sheet (English) / at [http://www.euramaxcanada.com/pdfs/YardcraftersPlanningSheet\\_EN.pdf](http://www.euramaxcanada.com/pdfs/YardcraftersPlanningSheet_EN.pdf) or Yardcrafters Planning Sheet (French) [http://www.euramaxcanada.com/pdfs/YardcraftersPlanningSheet\\_FR.pdf](http://www.euramaxcanada.com/pdfs/YardcraftersPlanningSheet_FR.pdf) to sketch your plan, fax or email it to us, and we will do the material take-off for your project.

The on-line DrySnap Calculator is an automated tool that will create a material list for you based on the information you provide. <http://www.drysnap.com/drysnapcalculator.asp>

### Material Estimates - Roof Drainage Systems

Let us make your job a little easier with our **FREE** Materials Estimate Service. For your convenience, use this on-line request form that helps provide the information necessary for us to estimate the materials needed for your project.

For your convenience, use our on-line request form (url below) that provides the information necessary for us to estimate the materials needed for your project.  
<http://www.euramaxcanada.com/RDmaterialestimate.html>

Or, if you wish, download the Planning & Selection Guide you need from the list below. Use it to sketch your plan and either fax or email to us, along with your contact information. We will do the material take-off for the project.
