To remove worn pile: Using a sharp utility knife, firmly draw the knife down the center of the pile across it's entire length.

Then pull out old pile and debris. Use a screwdriver or scratch awl to pry out old pile if necessary.

To install new pile: Insert one side of the length of pile and use a slot screwdriver to push in the other side

HELPFUL HINTS FOR REPAIRING / REPLACING Corner & Tilt Keys • Slide Bolts

CORNER AND TILT KEYS

1. Removal of corners or tilt keys requires drilling out indentations holding corners into frame. Using a 3/32" drill bit, drill out indentation only. Do not drill all the way through corner (See Photo 1).
2. Secure window frame to work bench and lightly tap frame apart using a block of wood and hammer (See Photo 2).
3. Remove broken corners using a screwdriver or similar tool, drive broken piece out, or back into frame (if piece will not come out).
4. Select proper replacement corner or tilt key and insert into frame and re-assemble.
5. Using a nail set indent frame into corner key. Indent in two places on each leg of key (See Photo 3).

SLIDE BOLTS

1. Remove bottom frame, using the same procedure as Step 1 and 2 above.
2. Slide bolt and spring will slide out when corner key is removed.
3. Select proper slide bolt, insert spring and slide bolt into frame (See Photo 4).
4. Assemble frame and using a nail set indent frame into corner key (See Photo 3).

CHANNEL WINDOW BALANCES

Used On Single Or Double Hung Sash

Balance Shown Installed In Jamb
With Vent Removed

Ordering Tips:

1. Check the back side of channel for stamped numbers (i.e.; 1410, 28A, 3620, etc.).
 - a). The first two digits indicate the actual glass height.
 - b). The balance is **1" LONGER** than the part number indicates (i.e.; **#1410 is 15" long**).
 - c). The second two digits or letter designation (A, B, C, D) denote the weight series of the balance (i.e.; #1410 or 14A is for light weight sash, 1420 or 14B is medium, 1430 or 14C is medium to heavy and 1440 or 14D is heavy. Please see the enclosed **Selection Chart** for actual weight variations.
2. **The balance number, by itself, does not include top or bottom guides.**
 - a). Determine the correct guides required from the accessory page. You may use the existing guides from the defective balance, however, this will require drilling out the attaching rivets.
 - b). New guides may be ordered (installed) using the double asterisk (**) part number on page 83. They may also be ordered in bulk (50/bag with rivets or, in individual kits) and installed by the dealer. A "Universal Kit" (**EP-3719**) is available which includes a popular assortment (2 top guides, 3 bottom guides, 2 rivets and 1 take-out clip).
3. A rivet set tool (**EP-3740**) is available to expedite installation of guides to balance.

Installation Hints: Vents must be removed in order to replace the balance assemblies.

TO REMOVE VENT: Close vent to expose take-out clips. Open both clips for vent removal. Raise vent until top guide engages take-out clip. Continue to raise vent, 2 to 3 inches more. Move vent right or left as far as possible. Removal is then accomplished by swinging the opposite side of vent inward.

TO REPLACE BALANCE ASSEMBLY: Push down on balance until top guide is clear of take-out clip. Hold firmly and slowly lift up and away from jamb. Remove terminal clip and install new balance assembly using the reverse installation procedure. Be sure that top guide is secured under take-out clip. It is recommended that both balance assemblies be replaced in order to allow for efficient operation.

TO REPLACE VENT: Position right or left side of vent into jamb, 2 to 3 inches above take-out clip and swing opposite side into alignment with frame. Then lower vent to engage balances and on down to clear take-out clips. This will automatically center the vent. Snap take-out clips into jamb to facilitate normal operation.
