CASTERS TO MEET YOUR NEEDS

Rubbermaid's best-in-class heavy-duty casters have been specially chosen for each of our products to meet your most demanding environments.

POLYOLEFIN

Hard-tread polyolefin casters roll easier than soft tread casters. Non-marking, impact and chemical resistant casters won't flat-spot under static loads or pick up metal shavings, nails, and other debris.

PNEUMATIC

Pneumatic casters provide a cushioned and quiet ride for fragile loads, making them ideal for rough and uneven surfaces, inside and out.

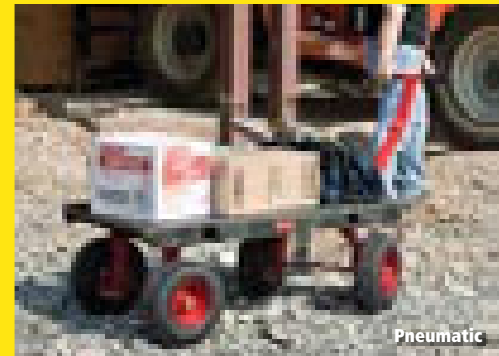

THERMOPLASTIC RUBBER (TPR)

TPR casters absorb shock, and provide floor surface protection and quiet operation. Chemical and water resistant.

WAVE BRAKE™

WaveBrake's® revolutionary bucket shape with molded-in patent-pending wave brakes reduces splashing up to **40%** for safer, easier, and more efficient mopping.

WaveBrake® Mopping Systems

Rubbermaid is the world's leading manufacturer of mop buckets.

WaveBrake® Mopping Systems improve productivity and help reduce labor costs. WaveBrake® can handle any mopping job with ease, in sizes from 26 quarts to the new 44 quart system.

DIRTY WATER BUCKET

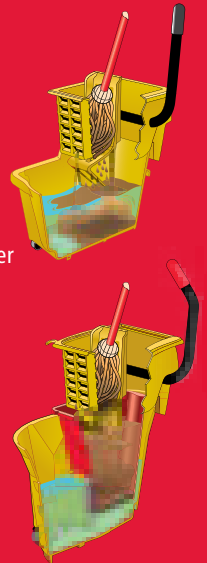

- Separates dirty water from clean water
- Preserves the quality and cleaning power of cleaning solution
- Reduces water and chemical usage
- Helps produce cleaner, less slippery floors
- Divides liquid weight; less lifting power needed when emptying buckets

HOW IT WORKS

Traditionally, wringers release dirty water directly back into the bucket's primary cleaning water.

Rubbermaid's Dirty Water Bucket nests below the WaveBrake® Wringer to collect the dirty water and keep it separate from the cleaning solution.

WaveBrake® 44 Qt Mopping System

High capacity 44 Quart WaveBrake® mop bucket and wringer system makes easy work of even the largest mopping jobs.

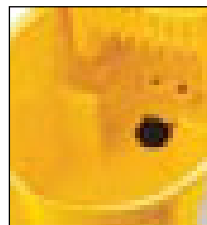

- Holds up to 44 quarts for high capacity mopping
- Innovative foot pedal water release mechanism for easy emptying
- Accepts WaveBrake® Dirty Water Bucket 9C74 (see pg. 148)
- Lasts 58 times longer than comparable wringers*
- Tested to exceed 50,000 wringing cycles; average wringers* perform approximately 860 cycles
- Premium tubular steel and structural web molded plastic
- Removable casters

CLEANING: Wet Mop Selection Guide

WET MOPPING

There are several important factors to consider when choosing a wet mop. Use the guidelines on the following pages to choose the best wet mop for your floor care needs.

GENERAL MOPPING

Choose mops with high absorbency, release, and durability. If laundering is available, launderable mops will be the most economical choice. Microfiber, synthetic, rayon, and blended fiber mops with looped ends and woven tailbands offer the best performance and launderability.

FINISH MOPPING

Look for microfiber, rayon, or synthetic mops for high absorbency and release, and construction features such as tailbands and looped ends for better floor coverage and less streaking.

LAUNDERABILITY / DURABILITY

The launderability of a mop is based on the number of commercial washing and drying cycles it can withstand before the construction of the mop is degraded or the performance declines. The durability of a mop is a measure of how long it will perform before needing to be replaced. Microfiber, synthetic, and blended fiber mops have the highest levels of launderability and are the most durable.

ABSORBENCY

The absorbency of a mop refers to its ability to pick up and hold liquid. Higher levels allow faster floor drying times, leading to greater productivity and worker safety. Microfiber, rayon, and cotton yarns have the highest absorbency.

RELEASE

Release is the ability of a mop to disperse liquid onto the floor or during wringing. Higher levels allow faster and more complete wringing, as well as more efficient application of cleaning solutions on the floor. Microfiber, rayon, and synthetic yarns offer the best release of liquids.

Dust Mopping

There are several important factors to consider when choosing a dust mop. Use the guidelines on the following pages to choose the best dust mop for your floor care needs.

General Dust Mopping

Choose mops with high dust pick up and durability. If laundering is available, launderable mops will be the most economical choice. Microfiber looped-end and twisted loop mop heads with reinforced stitching and slip-on/slide-off backing offer the best performance and launderability.

Mop Construction Features

T iSTed LoopS

Highly effective at capturing dust and dirt. Premium twisted loops are less prone to snags, frays, and unraveling during cleaning and laundering.

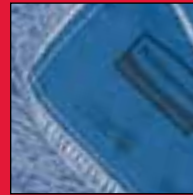

Looped endS

Reduce fraying and de-plying for better durability and longer product life. More effective than cut-end mops.

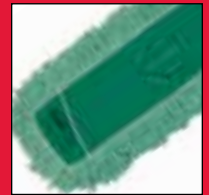

CuT endS

Economical construction for general purpose dusting.

rein For Ced STiTC inG

Reinforced, double-needle stitching at key 'wear' points increases product life.

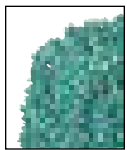

bACk in G deSiGn

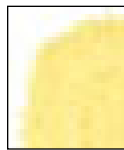

Slip-on/slide-off backing allows quick, easy setup for standard or breakdown mop frames.

Launderability

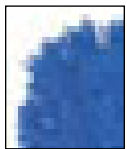

The launderability of a mop is based on the number of commercial washing and drying cycles it can withstand before the construction of the mop is degraded or the performance declines. Microfiber, synthetic, and blended fiber mops have the highest levels of launderability.

Durability

The durability of a mop is a measure of how long it will perform before needing to be replaced. Microfiber, synthetic, and blended fiber mops are the most durable.

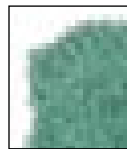

Mops with **antimicro™ia™ers** have greater durability because they inhibit the bacterial growth that causes mop odor and discoloration.

Dust Pick Up

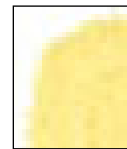

Dust pick up is the ability of a mop to remove dust and dirt from the floor surface. Microfiber, blended fiber, and synthetic mops have the highest degree of dust pick up.

BROOM & BRUSH CONSTRUCTION

Surface textures and types of dirt vary throughout a facility, so choosing the correct broom and brush construction is important for maximum cleaning effectiveness. Rubbermaid Commercial Products brooms and brushes offer a complete range of blocks and fill types to clean virtually any surface.

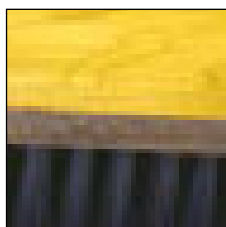

BLOCK STRUCTURES

STRUCTURAL FOAM BLOCK

Resists cracking, splitting, warping, and rotting. Helps prevent bacteria growth. Two threaded holes provide long product life.

WOOD BLOCK

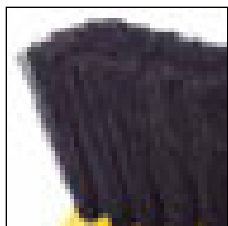

A classic look that resists moisture and helps prevent cracking. Two threaded holes provide long product life.

BLOCK & FILL DESIGN

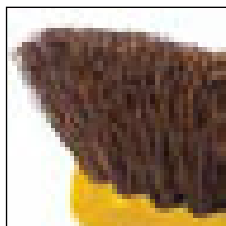

Staggered hole pattern prevents gaps in fill material for better performance. Dense fill leads to longer brush life. Flagged tips pick up fine dust and dirt particles. Flared ends allow access to corners.

FILL® NATURAL

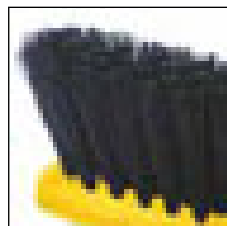

HORSEHAIR

Very durable with a naturally flagged tip; good shear/break resistance. Will not scratch smooth or highly polished surfaces. Not for use on oily or wet surfaces.

PALMYRA

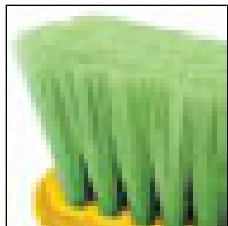

Medium to highly stiff fiber from the Palmyra Palm provides durability and good bristle recovery. Can be used wet or dry.

TAMPICO

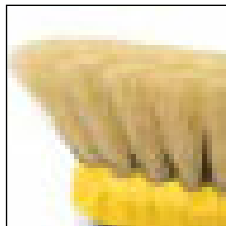

Soft to medium stiff fiber from the Agave plant. Durable and retains shape after continual use. High resistance to heat, alkali, solvents, and acid. Can be used wet or dry.

FILL® SYNTHETIC

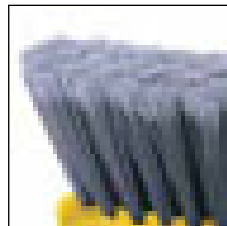

NYLON

Very durable with excellent abrasion resistance, shear/break strength, and bristle bend recovery. Will not stain, discolor, or absorb odors. Can be used wet or dry and resistant to alkalis and most solvents.

POLYSTYRENE

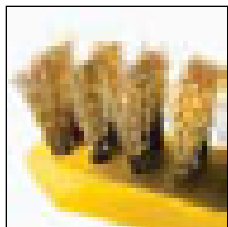

Extremely durable. Excellent bristle bend recovery and shear/break strength. Resistant to water, oils, and solvents. Not for sweeping compounds or oily surfaces.

POLYPROPYLENE

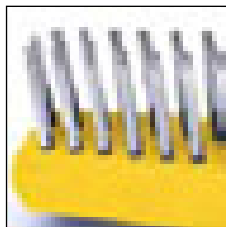

Very durable with good abrasion resistance and shear/break strength. Will not stain, discolor, or absorb odors. Resistant to solvents, acids, oils, fungus, and bacteria growth. Can be used wet or dry.

FILL® WIRE/METAL

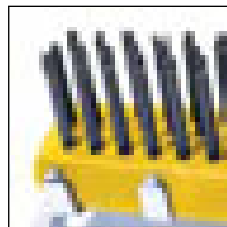

BRASS

Provides a high degree of abrasion without severely scratching hard surfaces. Will not rust. Best for heavy cleaning of metal or brick surfaces that cannot sustain heavy scratches.

STAINLESS STEEL

Provides a high degree of abrasion and wear resistance. Resists chemicals and rust. Excellent bend recovery. Best for aggressively removing residue from metal or other resilient materials.

TEMPERED STEEL

Provides a high degree of abrasion and wear resistance. Good bend recovery. Best for aggressively removing residue from metal parts or brick work.

A true odor neutralizer, TCell™ refills are available in a wide range of customer preferred fragrances from mild to intense for a clean, fresh scent that lasts. Conventional gel systems lose their fragrance intensity over the life of the refill, but TCell™ remains constant.

TC® TCell™ Refills

The TCELL™ odor control system dispenses a consistent level of fragrance.

- Up to 33% refill source reduction over traditional 30 day systems
- Standard Setting: 60 Days - Standard Size Washroom: 3 to 4 stalls/fixtures
- Light Setting: 90 Days - Smaller Size Washroom: 1 to 2 stalls/fixture
- No propellants or added VOCs
- Recyclable refill components

PATENTED FUEL CELL TECHNOLOGY

The fuel cell creates hydrogen in the fragrance chamber. As each molecule of hydrogen is created it forces an equal volume of fragrance out of the chamber. Natural air flow in the washroom distributes the fragrance throughout the room.

What is HACCP?

- Stands for Hazard Analysis Critical Control Points.
- It's a Process Control system.
- It is a protocol that provides guidelines.
- But it is not a legislation or law itself.

Why comply with HACCP guidelines?

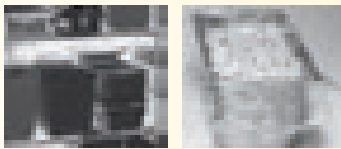

- To avoid food contamination in Food Preparation Process.
- To prevent any unsafe food from leaving the process (this process could be for a food processing plant or food preparation in a restaurant).

C

C. Food Preparation and Small Storage

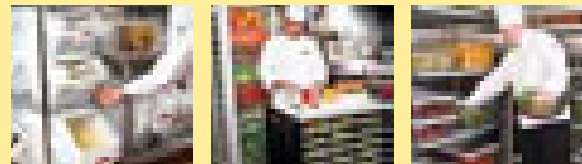

Problems

- Improperly stored food leads to cross contamination.
- Improperly covered food leads to spoilage.

RCP Solutions

- Use covers on all storage containers for safety.
- Store products with ready to eat foods above raw foods to reduce risk of cross contamination.
- Use only NSF certified storage containers and carts for reduced risk of cross-contamination.

ProSave™ Shelf Ingredient Bins

ProSave™ Racks and Carts, GN Pans

ProSave™ Dual Action Food Box Lid

How does it work?

1. Conduct a hazard analysis
They can be :
 - Biological (eg. salmonella)
 - Physical (eg. glass in food)
 - Chemical (eg. cleaning chemical)
2. Determine Critical Control Points (CCP's).
3. Establish critical limits.
4. Monitor control of CCP's.
5. Establish pre-planned corrective actions to be taken.
6. Establish procedures for verifying that the system is working.
7. Establish a document and record keeping procedures.

D

D. Cooking

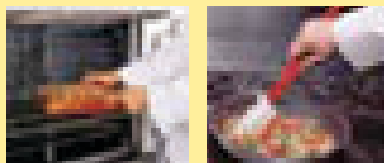

Problems

- Metal pans dent, creating room for bacterial build-up.
- Utensils can melt in preparation = physical hazard.

RCP Solutions

- Straight from preparation to cooking. One GN Container for all preparations : Preparing > Storing > Cooking > Cooling > Transporting.
- Heat suitable High Heat Scrapers enable secure cooking of hot preparations.

GN Food Pans

High Heat Scrapers

Comply with HACCP Guidelines.

- **YOU** avoid costs associated with poor food hygiene.
- **YOU** protect your reputation and image.

LIDS FOR EVERY NEED

1 SECURE SEALING LID

Two-seal system makes this lid the most air tight of all the Rubbermaid options and is ideal for longer term storage or air sensitive foods. Easy grip tab allows for easy removal of the lid from the pan.

2 PEG HOLE COVER WITH HANDLE

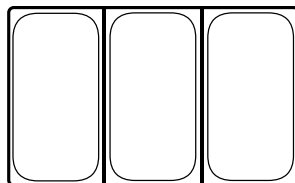

Peg hole allows pan to be hung and dry faster, helping to prevent health risks from standing water. Rubbermaid's peg hole solution is the only NSF certified hanging solution on the market.

3 NOTCHED COVER WITH HANDLE

NSF certified notch allows spoon to be easily available while food remains covered. Notch keeps spoon handle out of food, complying with FDA Food Code

4 SOFT SEALING LID

Seals on insert pan help reduce air flow to food; therefore, maintaining food quality. No overlap on food pans allows easy use in transport.

*DESIGNED TO EN 631-1 C.E.N. STANDARD

Developed by the European Committee for Standardization and based on a gastronorm modular system, ensures compatibility of the pans with other kitchen equipment
