Installation Tips

It's easy with either loose screws or collated reversible fasteners and the SHD150XP tool. Detailed instructions are included in every pack of Senco Mantis Hidden Deck Clips.

STARTER CLIP

Line up the back of the Starter Clip. Fasten this clip to the ledger board with the screws supplied. Slide the deck board groove into the Starter Clip tab.

DECK CLIP

Slide the Mantis Clip into the deck board groove. Fasten to the joist using the supplied fasteners.

FINISH CLIP

FLUSH FINISH: Fasten the Finish Clip leg with one hole to the underside of the deck board. Align the deck board edge with the inside of the Finishing Clip leg with two holes, fasten to the rim joist.

OVERHANG FINISH: Fasten the Finish Clip leg with one hole into the underside of the deck board. Fasten the leg with two holes to the rim joist, pulling the deck board tight into the Deck Clip.

BUTT JOINT

For butt joints that are continuous to the length of the joist, a second joist is required. If the butt joint is random, you can secure a second piece of joist (approximately 18" in length) to the joint area.

AIR COMPRESSORS & KITS

THE INNOVATION YOU'VE COME TO EXPECT, NOW WITH 200 PSI

Whether you need an air compressor for punch-out jobs or for all-day performance, SENCO offers high quality, reliable options to meet your needs.

FEATURES

Our new line of 200 psi air compressors provides plenty of tank storage and air flow for the job site or professional shop. They're equipped with dual couplers so you can run two hoses simultaneously. They feature an oil-free pump design to reduce maintenance, and integrated control panels provide easy access to couplers, control knobs and highly visible gauges. The newly designed full roll cage protects vital components.

These 200 psi options complement SENCO's iconic PC1010N portable finish and trim air compressor. Powerful, but also ultra-quiet and lightweight, the PC1010N features an oil-free pump design, integrated control panel and rugged roll cage.

FASTENER FINISH TYPES

CORROSION RESISTANT TYPES

HOT DIPPED GALVANIZED

Hot Dipped Galvanized nails have one ounce per square foot of zinc coating. The zinc coating on the nail acts as a barrier between the base steel and the elements, slowing the corrosion process. Ideal for preservative-treated wood and most exterior applications.

GOOD
CORROSION
RESISTANCE

304 STAINLESS STEEL

For moderate environments. 304 Stainless Steel contains 18% chromium and 8% nickel among other elements, making it resist most oxidizing acids and rust. An excellent choice for all types of environments and woods including exotic woods, cedar or redwood. Recommended use: Exposure to wet conditions regularly and more than 5 miles away from a body of water.

BETTER
CORROSION
RESISTANCE

316 STAINLESS STEEL

For extreme environments. 316 Stainless Steel contains 16% chromium, 10% nickel, and 2% molybdenum. The addition of molybdenum and a higher nickel content increases the corrosion resistance properties of 316 Stainless Steel. The ultimate choice for highly corrosive environments and works well in all types of woods. Recommended use: Exposure to extreme corrosive elements (salt, air and moisture) and within 5 miles of the coast.

BEST
CORROSION
RESISTANCE

ALUMINUM NAILS

Ideal for use in soft woods, particularly cedar and redwood applications to eliminate staining, bleeding, or streaking. Often used for attaching siding and fencing. Aluminum nails are also recommended when installing aluminum siding. Aluminum nails ARE NOT recommended for use in preservative-treated wood or hardwoods.

BRIGHT BASIC

Bright Basic fasteners are an uncoated steel, which is commonly used in application where corrosion protection is not required such as, interior framing, finish and trim. These fasteners are not recommended for the use in treated lumber or exterior applications.

ELECTRO GALVANIZED

Electro-Galvanized fasteners have a thin layer of zinc coating that helps corrosion resistance in mild weather conditions and in areas with lower humidity. Because of its minimal protective properties these fasteners are recommended for interior use in areas such as kitchens and bathrooms.
